Appendix A: Comprehensive Plan GOPs

Exhibit A-1

Future Land Use Element

Policy 4.1.1

Mixed-Use Low-Intensity (8-30 units per acre)

This category allows a mixture of residential and non-residential uses such as standard lot single-family houses, small-lot single-family houses, duplex houses, townhouses (attached housing), accessory dwelling units, group homes, multi-family housing (if compatible in scale and character with other dwellings in the proposed neighborhood), offices scaled to serve the surrounding neighborhood, retail scaled to serve the surrounding neighborhood, public and private schools, places of religious assembly and other community civic uses, and traditional neighborhoods on sites 16 acres or larger in conformance with the adopted Traditional Neighborhood Development (TND) ordinance. Residential development shall be limited to 8 to 30 units per acres. Lots that existed on November 13, 1991 and that are less than or equal to 0.5 acres in size shall be exempt from minimum density requirements. Intensity will be controlled, in part, by adopting land development regulations that establish height limits of 5 stories or less; however, height may be increased to a maximum of 8 stories by special use permit. Land development regulations shall establish the thresholds for the percentage of mixed uses for new development or redevelopment of sites 10 acres or larger. At a minimum, the land development regulations shall encourage that: at least 10 percent of the floor area of new development or redevelopment of such sites be residential; or, that the surrounding area of equal or greater size than the development or redevelopment site, and within 1/4 mile of the site, have a residential density of at least 6 units per acre. Residential use shall not be a required development component for public and private schools, institutions of higher learning, places of religious assembly and other community civic uses. Buildings in this category shall face the street and have modest (or no) front setbacks.

This category shall not be used to extend strip commercial development along a street. Land development regulations shall ensure a compact, pedestrian-friendly environment for these areas, and provide guidelines or standards for the compatibility of permitted uses.

Residential Low-Density (up to 12 units per acre)

This land use category shall allow dwellings at densities up to 12 units per acre. The Residential Low-Density land use classification identifies those areas within the City that, due to topography, soil conditions, surrounding land uses and development patterns, are appropriate for single-family development, particularly the conservation of existing traditional low density neighborhoods, single-family attached and zero-lot line development, and small-scale multi-family development. Land development regulations shall determine gradations of density, specific uses and performance measures. Land development regulations shall specify criteria for the siting of low-intensity residential facilities to accommodate special need populations and

appropriate community level institutional facilities such as places of religious assembly, public and private schools other than institutions of higher learning, and libraries. Land development regulations shall allow home occupations; accessory units in conjunction with single-family dwellings; and bed-and-breakfast establishments within certain limitations.

Office

The Office land use category identifies areas appropriate for office and residential uses. This category is intended to identify appropriate areas for professional and service uses, hospital and medical uses, compound and residential uses, and appropriate ancillary uses. Office designations shall be applied to compact office development. Residential uses in office districts shall be designed as new in-town development, mixed-use, live-work, compound use or shall accommodate existing residential development within the district. Densities shall not exceed 20 units per acre. Land development regulations shall determine the appropriate scale of uses; and the specific criteria for the siting of private schools and churches. Intensity will be controlled by adopting land development regulations that establish height limits of 5 stories or less, that require buildings to face the street, and modest build-to lines, instead of a maximum floor area ratio; however, height may be increased to a maximum of 8 stories by special use permit.

Objective 4.2	**The City shall implement regulations that will protect low-intensity uses from the negative impacts of high-intensity uses and provide for the healthy coexistence and integration of various land uses.**
Policy 4.2.1	The City shall adopt land development regulations that provide protection for adjacent residential areas and low intensity uses from the impacts of high intensity uses by separating intense uses from low-intensity uses by transitional uses and by performance measures. Performance measures shall address the buffering of adjacent uses by landscape, building type and site design. Regulation of building type shall insure compatibility of building scale, and overall building appearance in selected areas. Regulation of site design shall address orientation. Such regulation shall also include arrangement of functions within a site, such as parking, loading, waste disposal, access points, outdoor uses and mechanical equipment; and the preservation of site characteristics such as topography, natural features and tree canopy.
Policy 4.2.2	The City shall adopt land development regulations that encourage better access between residential neighborhoods and adjacent neighborhood centers through the use of street design and the use of pedestrian, bicycle and transit modifications.
Policy 4.2.3	The existence of non-residential uses on one or more corners of an intersection will not justify approval of the development of all corners with the same or similar use, nor does the existence of non-residential uses on a major arterial street dictate that all frontage must be similarly used.
