

February 29, 2016

From: Concerned Citizens of Alachua County

To: City Commission, City of Gainesville

We the undersigned residents of Gainesville have the following concerns and objections to the proposed amendments to the Blues Creek Master Plan:

1. We object to the placement of any utilities through the conservation area. This area was set aside by the developer in a State of Florida Division of Administrative Hearings settlement between the Conservation Planning Coalition of Alachua County, Inc. vs. Suwannee River Water Management District, Larry Ross and Department of Environmental Regulation. The developer agreed, "There shall be no construction or disturbance of the conservation area pre or post development" (State of Florida Division of Administrative Hearings, Case No. 87-4508).
2. We are concerned that the flood zone boundaries will change on existing and new homes due to disruption of natural water flow by excavation, fill and/or deforestation.
3. We are concerned that a single access route may become impassable for first responders in a hurricane or other emergency.
4. We are concerned with the proximity of the road to sink holes and how associated pollutants may negatively affect the aquifer.
5. We are concerned that storm water drainage may be sent to sink hole environments and negatively affect the aquifer.
6. We are concerned that long-term development has significantly impacted and reduced the Conservation Area wetlands.
7. We are concerned with the environmental impact a new lift station may have during a flooding event.

objections to the proposed amendment

1. We object to the placement of any utilities through the conservation area which was set aside by the developer in a State of Florida Division of Administrative Hearings settlement between the Conservation Planning Coalition of Alachua County and the Suwannee River Water Management District, Larry Ross and Department of Environmental Regulation. The developer agreed, "There shall be no disturbance of the conservation area pre or post development" (State of Florida Department of Administrative Hearings, Case No. 87-4508).

2. We are concerned that the flood zone boundaries will change on existing homes due to disruption of natural water flow by excavation, fill and other development.

3. We are concerned that a single access route may become impassable for emergency responders in a hurricane or other emergency.

4. We are concerned with the proximity of the road to sink holes and that pollutants may negatively affect the aquifer.

5. We are concerned that storm water drainage may be sent to sink holes which may negatively affect the aquifer.

6. We are concerned that long-term development has significantly reduced the Conservation Area wetlands.

7. We are concerned with the environmental impact a lift station may have during a flooding event.

Name Margaret Ellison

Address Margaret Ellison

5133 NW 75 Lane

Seaside FL 32653

March 11, 1976

From: Lieutenant Governor of White Creek

To: City Commission, City of Gainesville

Re: the anticipated development of White Creek here the following conditions and objectives are proposed in addition to the White Creek Master Plan.

1. We agree to the placement of any utilities through the construction site. This item shall not apply to the development of a State of Florida Division of Administrative Hearings address to the Construction Planning Division of Alachua County, Inc. in accordance with Water Management District, Lake Okechobee and Department of Environmental Regulation. The developer agrees, "There shall be no construction or disturbance of the construction site prior to post development" (check of Florida Division of Administrative Hearings, Case No. 87-4598).

2. We are concerned that the forest area surrounding will change its existing and use features due to alteration of natural water flow by excavation, fill and/or deforestation.

3. We are concerned that a single access route may become responsible for fire response in a fire or other emergency.

4. We are concerned with the proximity of the road to oak trees and have concerned pollutants may negatively affect the quality.

5. We are concerned that storm water drainage may be used to wash both sediments and pollutants off the site.

6. We are concerned that long term development has significantly impacted and reduced the riparian area wetlands.

7. We are concerned with the environmental impact a fill station may have during a flooding event.

3. We are concerned that a single access route may become impassable for first responders in a hurricane or other emergency.
4. We are concerned with the proximity of the road to sink holes and how associated pollutants may negatively affect the aquifer.
5. We are concerned that storm water drainage may be sent to sink hole environments and negatively affect the aquifer.
6. We are concerned that long-term development has significantly impacted and reduced the Conservation Area wetlands.
7. We are concerned with the environmental impact a lift station may have during a flooding event.

From: Concerned Citizens of Blues Creek

To: City Commission, City of Gainesville

We the undersigned homeowners in Blues Creek have the following concerns and objections to the proposed amendments to the Blues Creek Master Plan:

1. We object to the placement of any utilities through the conservation area. This area was set aside by the developer in a State of Florida Division of Administrative Hearings settlement between the Conservation Planning Coalition of Alachua County, Inc. vs. Suwannee River Water Management District, Larry Ross and Department of Environmental Regulation. The developer agreed, "There shall be no construction or disturbance of the conservation area pre or post development" (State of Florida Division of Administrative Hearings, Case No. 87-4508).
2. We are concerned that the flood zone boundaries will change on existing and new homes due to disruption of natural water flow by excavation, fill and/or deforestation.
3. We are concerned that a single access route may become impassable for first responders in a hurricane or other emergency.
4. We are concerned with the proximity of the road to sink holes and how associated pollutants may negatively affect the aquifer.
5. We are concerned that storm water drainage may be sent to sink hole environments and negatively affect the aquifer.
6. We are concerned that long-term development has significantly impacted and reduced the Conservation Area wetlands.
7. We are concerned with the environmental impact a lift station may have during a flooding event.
