	Telecommunications	C5

Basis of Accounting

The financial statements are presented on the accrual basis of accounting, under Generally Accepted Accounting Principles (GAAP). Under this basis, revenues are recognized in the period earned and expenses are recognized in the period incurred. Additionally, separate financial statements are presented in accordance with the Utilities System Revenue Bond Resolution (Bond Resolution). In the Bond Resolution statements, rates are designed to cover operating and maintenance expense, debt service and other revenue requirements, which exclude depreciation expense and other non-cash expense items.

The Bond Resolution financial statement method of reporting results in costs being included in the determination of rates in different periods than when these costs are recognized for GAAP financial statement purposes.

Gainesville Regional Utilities (GRU) has adopted the uniform system of accounts prescribed by the Federal Energy Regulatory Commission (FERC) and the National Association of Regulatory Utility Commissioners (NARUC).

Definitions of Key Account Groups

Debt Service – Accounts for funds accumulated to provide payment of principal and interest on, or to redeem, outstanding debt.

Electric Fuel Adjustment Revenue – Revenue from fuel cost recovered from customers beyond the amount that is recovered in the base energy charge. GRU's cost of fuel for the electric system is passed directly through to its customers. The base energy charge includes a portion of the fuel cost, 6.5 mils, or \$6.50 per 1,000 kWh. Fuel cost beyond this amount is applied to customer bills as calculated monthly, via a fuel adjustment rate.

Electric Interchange Sales – Large blocks of energy sold to other utilities on a firm or non-firm basis. These sales are controlled through GRU's Power Supply Department, which monitors excess availability of power generated.

Electric Retail Sales – Sales to the ultimate or consuming customer includes residential, general service (demand and non-demand), large power, and City traffic signals and streetlights.

Gas Commercial & Industrial Sales (General Service) – Natural gas and liquified propane service provided on a firm, non-interruptible basis for any purpose except for residential purposes.

Gas Interruptible Sales – Natural gas service provided on a non-firm basis to nonresidential customers. This service is subject to interruption pursuant to the policies and conditions stipulated to by the customer and the System.

Gas Residential Sales – Natural gas and liquified propane service provided on a firm, non-interruptible basis to households and other nonprofit living units.

GRUCom Fiber Optics Transport Revenue – Includes revenue for sales of point to point and carrier access circuits delivered in whole, or in part, on the GRUCom fiber optic network. These sales are primarily to other telecommunications carriers, commercial customers and government units requiring high bandwidth connections for delivery of data, voice and video signals. Also includes revenues from dedicated Internet access services delivered over the fiber network.

ISP sales – Revenue generated from the sale of retail Internet access. GRUNet is available anywhere in the local calling area and is presently used primarily by residential customers for access to the Internet at a data rate of 56 kilobits per second.

Lease\Leaseback Transaction – The lease and subsequent leaseback of Deerhaven Unit 1 and a substantial portion of the Deerhaven Unit 2 generating facilities. Under the terms of the transaction, GRU continues to own, operate, maintain and staff the facilities. The net benefit to the City of this transaction was approximately \$35 million.

Nuclear Decommissioning\Fuel Disposal – As a partial owner of the Crystal River Unit 3 (CR3) nuclear power plant operated by Florida Power Corporation (FPC), GRU is responsible for its share of future decommissioning costs. These costs are expensed annually and recovered through rates charged to customers. The fuel disposal cost represents GRU's share of costs associated with safely disposing of CR3's spent nuclear fuel assembly units.

Operation & Maintenance Expense – Fuel – This represents the cost of the fuel supply needed to generate electric power, i.e. coal, oil and natural gas, as well as the fuel distributed directly to service accounts, i.e. natural gas.

Operation & Maintenance Expense – Non-Fuel – This represents all operating, maintenance and administrative costs needed to support electric power generation, transmission and distribution, water treatment and distribution, wastewater collection and treatment, and telecommunication services provided by GRU.

Other Electric Revenue – This includes miscellaneous revenue receipts not specified in other categories.

Other Electric Sales – This includes wholesales sales (sales for resale) to City of Alachua and Seminole Electric Co-op, and traffic signal and streetlight sales to the City and County.

Rate Stabilization Fund Transfer – This fund accounts for monies accumulated as a reserve for unplanned events, revenue changes, forecasting errors or unexpected losses and to stabilize rates over future periods through the transfer of funds to and from operations as necessary.

Surcharge – Additional charge to customers in the unincorporated service area, i.e. Electric – 10%; Water – 25%; Wastewater – 25%.

Tower Lease Rental Revenue — Revenue generated in conjunction with the lease of space on the City's communication and water towers for the location of antennas and related equipment. These leases are primarily with Cellular and Personal Communications Services (PCS) companies offering wireless communications in the Gainesville area.

Trunking Radio Revenue – Revenue generated by the GRU's 800 MHz radio system, delivering switched voice and data services for public safety and other government entities. Revenues are collected through monthly subscriber unit charges.

UPIF Contribution – The Utility Plant Improvement Fund (UPIF) accounts for funds used to pay for certain capital projects or debt service, the purchase or redemption of bonds, or otherwise provide for the repayment of bonds. The contribution level is established under a formula level set forth in the GRU Bond Resolution. It represents the equity that the utility puts into the system. Good business practice dictates and our bondholders require such equity contribution.

Wastewater – Other Revenues – Connection fee charges for wastewater service to new service locations.

Water - Other Revenues - Connection fee charges for water service to new service locations.

Current Year Performance-to-Date and Projected Results

Electric System

Projected retail sales of electricity is projected to come in 3% under budget due to a mild winter period during which the need for heating was lower than anticipated.

Interchange sales are down nearly 23% when compared to budget. The bulk of the difference can be attributed to lower than anticipated fuel costs, particularly influenced by the downturn in natural gas prices after the budget had been prepared. The remaining difference in sales was affected by a lower demand for our excess energy, thus a lower margin realized.

Interchange fuel expense mirrors the change in fuel costs and offsets in part the lower sales amount. The net affect on interchange sales is a projected shortage of about 24%.

Retail fuel expenses are projected to be nearly 14% under budget due to lower than expected natural gas prices; however, because fuel costs are a direct pass through, fuel adjustment revenues are also expected to be below budget.

Interest income and debt service are both down due to lower than budgeted interest rates.

Gas System

In the gas system, fuel costs are also passed through to customers. As in the electric system, gas prices were substantially less than budget, thus, fuel expense and sales are lower than originally forecast. In addition, a milder than anticipated winter has also reduced projected sales revenues.

Interest income and debt service costs are down due to lower interest rates than originally forecast. Debt service is also being affected by a delay in the issuance of debt associated with the Depot Avenue cleanup.

Water & Wastewater Systems

Water sales were down only slightly for the first six months compared to budget. Other water revenue, comprised primarily of connection fees, was down significantly. This was due to prepayment of charges by some builders prior to the October 1, 2001 establishment of a surcharge on connection fees.

Other wastewater revenues, primarily consisting of connection fees, are also down significantly for the first six months compared to budget. Again, this was due to the prepayment of charges by builders prior to October 1st.

Interest income and debt service costs are both down due to lower interest rates.

Telecommunications

Revenue for the first half of FY2002 is lower than planned. The difficult market environment for telecommunications services have been particularly severe for carrier customers and this has negatively affected fiber transport sales. Internet access revenue is also running behind plan as a result of slow growth in dial-up Internet access sales; however, we are starting a summer campaign for dial-up service which we hope will increase sales. Trunked Radio System (TRS) revenue for the year will also be less than budget due to the delay in acquisition of the fifth TRS tower site, which is to be made available for TRS equipment installation by Alachua County, and the resulting inability to activate Alachua County radios. Tower lease revenue is expected to end the year slightly ahead of plan due to newly signed leases with Personal Wireless Communication Services Providers.

While revenue production has been lower than expected this year, it is continuing to grow when compared to the previous year. The current operating revenue projection for FY2002 shows a 33.0% increase over FY 2001.

Of particular importance, progress is being made in discussions with Alachua County related to activation of all of their radios. The current plan calls for immediate turn-up of the completed Phifer/Grove Park tower site with a commitment by the County to activate 800 radios. Additionally, the fifth TRS tower site would be activated by October 1, 2002 and/or the County would be committed to activate all 1,100 of their radios.

However, with revenue lagging behind plan, GRUCom is making a concerted effort to limit operating and maintenance expenses. While the projection of FY2002 operating and maintenance expenses is lower than budget, unanticipated charges have increased the projection. In the second quarter, as the result of an insurance audit GRUCom was required to pay additional insurance premiums applicable to FY2001 totaling \$46 thousand. Additionally, GRUCom also paid, under protest, property taxes totaling \$131 thousand. These property taxes may be refunded at a later date since GRUCom was successful in a lawsuit contesting the tax assessments. However, the plaintiff, the Florida Department of Revenue, has appealed the district court's ruling.

Interest income is down because of the lower interest rates. Debt service is down because of the lower rates and slower than forecasted issuance of new debt.

The Energy Authority

GRU is an equity member of The Energy Authority (TEA), a power marketing joint venture. TEA markets GRU's excess power and looks to buy native load power cheaper than we can generate ourselves. Additionally, TEA provides risk management services which is very valuable in today's volatile power market.

Activity by TEA for the current fiscal year is shown below:

	MWH	NET REVENUES
Sales By TEA	10,291	\$ 65,834
Purchases from TEA	105,362	\$858,553
Total		\$924,387
