DISCLAIMER

It is imperative that everyone that uses this data be aware of the limitations of these files. The intention of the project was to derive data from a gross planning level. What locations within the GRU service area had a potential for needing an additional water or wastewater utility customer. Since there is no reliable or comprehensive source of data for private wells or septic tanks, we had to come up with a methodology to predict their location.

The location points were deduced from GRU accounts that had electric service but no water and/or wastewater. These points were given a cursory screening for obvious errors, but have not been field verified or screened further. There are undoubtedly many false positives included in the data, as well as many omissions. The points were then overlaid with our existing utility network to determine those locations that are on an adjacent main, or conversely, if they would require a main extension. They were then aggregated by this criteria. Note that elevation was not taken into account in determining potential severity.

Obviously, any future project development based on this data will require more detailed field research to determine the validity of the points.

Garneville Regional Utilities has prepared the information depicted on this map for its own use. It is not intended to be or should not be relied upon by others for any other purpose. Garneville Regional Utilities assumes no responsibility for errors or omissions in the information on this map.
