Curbside Recycling Composite Index

The Curbside Recycling Composite Index tracks the changing market prices of recyclable commodities collected from municipal curbside recycling programs. The Index consists of a weighted basket of specific benchmark grades of scrap curbside materials. The benchmarks include specific

grades of scrap glass, paper, plastic and metal. The Index includes snapshots of 5 viewpoints of market trends : the past 7 days, past 30 days, past 90 days, past 1 year and past 2 years.

The Composite Index is updated daily before noon EST and tracks 7 days per week. Transaction activity on the weekends is typically lighter; it is not uncommon to see no change reflected in the Index during this time period.

The Composite Index is derived from current spot market prices originating from the [Green Exchange \(GRN\)](#). This source of data is proprietary in nature and may not reflect external markets trends.
