

PLEASE SUPPORT GAINESVILLE'S EFFORTS TO FIGHT CLIMATE CHANGE

Because of the active support of our citizens, YOUR city government has become a national leader in the fight to address climate change. Budget constraints will limit our ability to be a strong voice to advocate for governmental action in Tallahassee and Washington without YOUR active support.

BE A PART OF THE SOLUTION

With your financial support, Gainesville will become a paying member of The Climate Communities (www.climatecommunities.us), and will continue to speak to the White House, members of Congress, and elected leaders in Tallahassee regarding this critical issue.

Gainesville is on track to meet the Kyoto standards of reducing greenhouse gases to 7% below 1990 levels by 2013, and has a great story to share with other local governments, Tallahassee and Washington. We are leading the way with innovative projects including:

- ❖ A traffic signal synchronization system that will smooth the flow of traffic 10-15% while reducing greenhouse gases by nearly 83,000 metric tons of CO2 per year.
- ❖ GRU's Energy Conservation Programs, including business and residential rebates, will lead to over 177,000 metric tons of CO2 reductions per year.
- ❖ Our first-in-the-U.S. solar feed-in-tariff is a model that has gained national attention, and will substantially increase green jobs and use of renewable energy in our region.
