

Commissioner Reina Saco  
Regular City Commission Meeting 08/04/2022

**Recommendation for amendments to the recommended draft ordinance:**

While I wholeheartedly support changing our code to allow a broader diversity of housing in our neighborhood, I am proposing an amendment in the hopes of assuaging some of the fears of our neighbors. Many have voiced concerns over a lack of data, and there is a wealth of data<sup>1</sup> from the past couple decades that have tracked the impacts on surrounding property values. That said, very few places are like Gainesville and we won't know with 100% certainty how something will impact Gainesville until it is tested in Gainesville.

I want to vote in favor of the staff proposals before us. But I ask that my colleagues consider:

- (1) Adding a sunset date for the new Neighborhood Residential zoning (three or five years) until which
- (2) City staff and our neighbors can track publicly available data (new construction, demolitions, the location of new construction, the size and specs of the new construction, etc.).
- (3) A single extension of the sunset date if data is deemed inconclusive or incomplete
- (4) If this measure sunsets and reverts, that all properties already developed or permitted to that date be grandfathered in

With real data at hand, a future City Commission will be able to make the changes permanent or allow the changes to revert to the way they are today. I hope that this exercise will give us and our neighbors time to collect data and see the true potential and limitations of these changes in practice. We can share data with the public and continue these conversations in real time.
