CLEAR SOUND
AUDIOLOGY

What is the *buzz* about
HEARING LOOPS?

- A HEARING LOOP provides HELP to individuals with hearing loss to hear and understand speech better in places such as church, large rooms, watching TV and in other poor acoustical environments.
- A copper wire called the LOOP, and a TELECOIL, which most hearing aids and cochlear implants are equipped with, are needed for the HEARING LOOP system to work. The sound system is connected to the LOOP, which transmits the sounds directly to the TELECOIL in the hearing aid or Cochlear implant.
- This direct sound transmission to the TELECOIL in your hearing aid or cochlear implant reduces the background noise significantly and facilitates CLEAR SPEECH UNDERSTANDING!
- HEARING LOOP systems are COST-EFFECTIVE and ECONOMICAL way to enhance your hearing!

**SCHEDULE YOUR FREE CONSULTATION AND FREE
HEARING LOOP SOUND DEMONSTRATIONS TODAY!**

- Find out if you can use a HEARING LOOP system in your living room!
