Alternative 1

- Substantially the same as the May 19, 2016 PD Layout Plan with the addition of a shared pedestrian facility to serve the southernmost 8 lots
- A cross section for the shared pedestrian facility would be subject to approval by Public Works and ultimately the City Commission at the Design Plat stage
- Preserves large trees and topography in NE area

Alternative 2

- Primary change is shifting the 4 southernmost lots to the NE section of the proposed subdivision
- Includes a requirement for a shared pedestrian facility to serve southernmost 4 lots; cross section to be approved at Design Plat stage
- Increases acreage in Conservation Management Areas (CMA) by 0.1 acres & adds more contiguous CMA area in the southern part of the subdivision

Alternative 3

- Shifts the southernmost 8 lots to the NE section of the proposed subdivision (clustering concept)
- Increases acreage in Conservation Management Areas (CMAs) by 1.73 acres & provides largest contiguous CMA in the southern part of the subdivision
- All streets within the proposed subdivision phase would be served by standard sidewalks

Revised Development Standards

- Text in Development Standards revised for each alternative PD Layout Plan
- Changes:
 - Minimum lot size reduced to $\frac{1}{4}$ acre from $\frac{1}{3}$ acre
 - Development activity in the “drainage easement, developed recreation, & conservation area” must be consistent with SRWMD Permit
 - If a lift station is used, location must be shown as a separate lot on the design plat

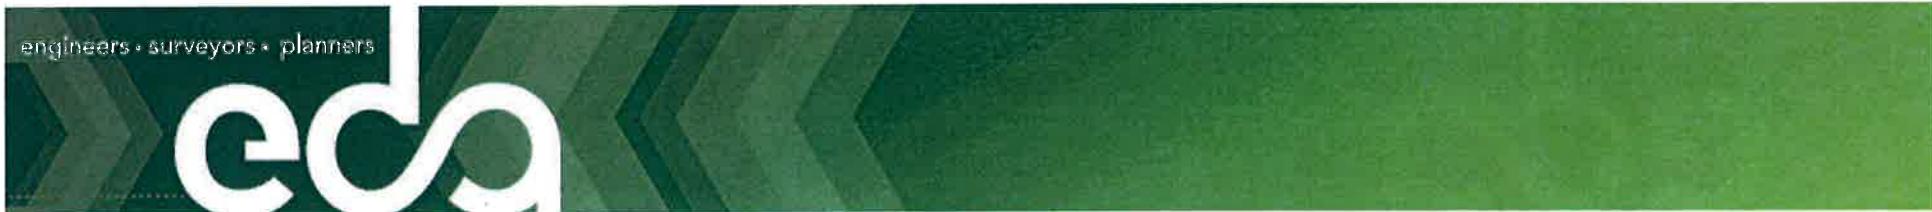

Development Standards changes cont.

- Alt. 1 & 2 include provisions for a shared pedestrian facility; cross section to be approved by Public Works at the design plat stage
- In Alt. 3, the perpetual ingress/egress easement is eliminated; sidewalks on all streets
- Utility easements & facilities allowed in Conservation Management Areas in accordance with an approved CMA management plan

Shared Pedestrian Facility

- Based on shared street principles
- Applicable in low-volume traffic areas with slow speeds
- Pedestrians, bicyclists, and cars can share the same space
- Efficient use of space
- Multiple design options (changes in materials or textures; separation using landscaping; striping; signage)

Applicability to Blues Creek Unit 5, Phase 2

- Residential area; low traffic speed design
- No through traffic
- Trip volume in Alt. 1 & 2 is very low
 - Alt. 1: 76 ADT 8 p.m. peak trips
 - Alt. 2: 38 ADT 4 p.m. peak trips
- “Context sensitive” area due to environmental characteristics (consistent with TME Policy 2.1.10)

Flush pavement with landscape & materials separation & signage
