Planning Consultant

Prepared by: Dean Mimms, AICP
Planning Consultant

SUBJECT: **Petition PB-17-114 LUC.** CHW, Inc. agent for Carolyn H. Jordan, owner. Amend the City of Gainesville Future Land Use Map from Single-Family: up to 8 units per acre (SF) to Urban Mixed-Use High Intensity: 10-100 units per acre; and up to 25 additional units per acre by Special Use Permit (UMUH), on \pm 1.48 acres. Located at 1135 SW 11th Avenue. Related to PB-17-115 ZON.

Recommendation:

Staff recommends approval of Petition PB-17-114 LUC.

Description

The proposed small-scale land use change from Single-Family (up to 8 units per acre) (SF) to Urban Mixed-Use High Intensity: 10-100 units per acre; and up to 25 additional units per acre by Special Use Permit (UMUH), will allow a mix of residential and non-residential uses and will substantially increase the redevelopment potential for this property that is proximate to a major corridor (SW 13th Street/US 441) and is within walking distance of the P.K. Yonge Developmental Research School (K-12), the University of Florida, UF Health hospitals, and the Veterans Administration hospital. The property is in the UF Context Area and is in the College Park/University Heights Community Redevelopment Area.

This petition pertains to an approximately 1.48-acre, developed, single-family, residential property at the southwest corner of SW 11th Avenue and SW 11th Terrace. It is adjacent and east of the 3.7-acre, 4-story, 188-unit, multi-family development called “The Nine” (Phase 1) that is under construction (and that was approved by Petition DB-16-146 SPL on January 24, 2017 by the Development Review Board). The applicant’s intention (stated in the Neighborhood Workshop Notice for the September 27, 2017 neighborhood workshop – see Exhibit C-1 – Application Package) “is to construct a second phase to The Nine apartment complex.”

The 4-story, 201-unit, Wildflower Apartments complex is located to the northeast across SW 11th Avenue, a 24-lot single-family residential enclave is to the north and east, and the P.K. Yonge Developmental Research School is one block to the east along SW 11th Street. The property is approximately 560 feet to the east of SW 13th Street/US 441, and is in a part of the City that has been steadily changing from single-family residential to multiple-family and mixed-use land use in recent years.

Table 1

Adjacent Existing Uses

North	SW 11 th AVE (north of which is single-family residential)
South	Multi-family residential
East	Single-family residential
West	Multi-family residential (“The Nine” - Phase 1)

Adjacent Land Use and Zoning

	Land Use Category	Zoning Category
North	SW 11 th AVE (beyond which is Single-Family (SF): up to 8 units per acre)	SW 11 th AVE (beyond which is RSF-1: Single-Family Residential)
South	Urban Mixed-Use (UMU): up to 60 units per acre; and up to 20 additional units per acre by Special Use Permit	Planned development district (PD)
East	Single-Family (SF): up to 8 units per acre	RSF-1: Single-Family Residential
West	Urban Mixed-Use High Intensity (UMUH): 10-100 units per acre; and up to 25 additional units per acre by Special Use Permit	Urban 9: Urban Mixed-Use High

See Exhibit B-1 for an aerial photograph of the property and surrounding area. See Exhibits B-2 and B-3 for maps that show the existing and proposed land use categories.

This petition is related to Petition PB-17-115 ZON, which proposes rezoning from Single-Family (RSF-1) district to Urban 9 (U-9) district.

Key Issues

- The proposed small-scale amendment from Single-Family: up to 8 units per acre (SF) to Urban Mixed-Use High Intensity: 10-100 units per acre; and up to 25 additional units per acre by Special Use Permit (UMUH), is consistent with the City's Comprehensive Plan and supports infill development and redevelopment at a central location in the urbanized area.
- The proposed land use change to UMUH will increase the development potential by substantially increasing the potential amount of residential and non-residential development relative to the current SF land use designation.

Basis for Recommendation

The staff recommendation is based on the factors stated in the Future Land Use Element and on State statute criteria, which are discussed below:

- Consistency with the Comprehensive Plan;
- Compatibility and surrounding land uses;
- Environmental impacts and constraints;
- Support for urban infill and redevelopment;
- Impacts on affordable housing;
- Impacts on the transportation system;
- An analysis of the availability of facilities and services;
- Need for the additional acreage in the proposed future land use category;
- Discouragement of urban sprawl as defined in Section 163.3164, F.S., and consistent with the requirements of Subsection 163.3177(6) (a)9, F.S.;
- Need for job creation, capital investment, and economic development to strengthen and diversify the City's economy; and,
- Need to modify land use categories and developmental patterns within antiquated subdivisions as defined in Section 163.3164, F.S.

1. Consistency with the Comprehensive Plan

The requested UMUH (Urban Mixed-Use High Intensity: 10-100 units per acre; and up to 25 additional units per acre by Special Use Permit) will substantially increase the potential development opportunities for this property by allowing increased residential density and by allowing mixed-use (residential and non-residential).

Future development of this property in accordance with the proposed UMUH land use category (and related, proposed U-9 zoning) is supportive of the City's objectives of discouraging urban sprawl, encouraging infill development and redevelopment, and promoting transportation choice.

The proposed UMUH land use category will be implemented by the Urban 9 (U-9) district proposed by related Petition PB-17-115 ZON.

This land use petition is consistent with the overall goal (Goal 1 of the Future Land Use Element (FLUE)) of the City to improve the quality of life and achieve a sustainable development pattern, in part by ensuring that a percentage of land uses are mixed. The proposed land use change to a mixed-use category is also consistent with Future Land Use Element Policies 1.2.3, Objective 1.5, Goal 2, Objective 2.1, Objective 4.2, and Policy 4.2.1. Please see below for these policies and for the Urban Mixed-Use High Intensity category under Policy 4.1.1.

Future Land Use Element

Goal 1 **Improve the quality of life and achieve a superior, sustainable, development pattern in the City by creating and maintaining choices in housing, offices, retail, and workplaces, and ensuring that a percentage of land uses are mixed, and within walking distance of important destinations.**

Policy 1.2.3 The City should encourage mixed-use development, where appropriate.

Objective 1.5 Discourage the proliferation of urban sprawl.

GOAL 2 **Redevelop areas within the City, as needed, in a manner that promotes quality of life, transportation choice, a healthy economy, and discourages sprawl.**

Objective 2.1 Redevelopment should be encouraged to promote compact, vibrant urbanism, improve the condition of blighted areas, discourage urban sprawl, and foster compact development patterns that promote transportation choice.

Policy 4.1.1 Land Use Categories on the Future Land Use Map shall be defined as follows:

Urban Mixed-Use High Intensity (UMUH): 10-100 units per acre; and up to 25 additional units per acre by Special Use Permit

This land use category allows residential, office/research, retail, and service uses either as stand-alone uses or combined in a mixed-use development format. Light assembly, fabrication, and processing uses within fully enclosed structures shall be allowed as specially regulated by the Land Development Code. The Urban Mixed-Use High-Intensity category is distinguished from other mixed-use categories in that it is specifically established to support research and development in close proximity to the University of Florida main campus. An essential component of the category is orientation of structures to the street and the multi-modal character of the area. Developments located within this category shall be scaled to fit the character of the area. Residential density shall be limited to 10 to 100 units per acre with provisions to add up to 25 additional units per acre by Special Use Permit as specified in the land development regulations. Lots that existed on November 13, 1991 and that are less than or equal to 0.5 acres in size shall be exempt from minimum density requirements. Unified developments that include a residential and non-

residential component (either horizontally or vertically mixed) shall not be required to meet the minimum density requirements. Building height shall be limited to 6 stories and up to 8 stories by a height bonus system as established in the Land Development Code. Land development regulations shall set the appropriate zoning densities: the types of uses; design criteria; landscaping, and pedestrian/vehicular access. Public and private schools, places of religious assembly and community facilities are appropriate within this category.

Objective 4.2 The City shall implement regulations that will protect low-intensity uses from the negative impacts of high-intensity uses and provide for the healthy coexistence and integration of various land uses.

Policy 4.2.1 The City shall adopt land development regulations that provide protection for adjacent residential areas and low intensity uses from the impacts of high intensity uses by separating intense uses from low-intensity uses by transitional uses and by performance measures. Performance measures shall address the buffering of adjacent uses by landscape, building type and site design. Regulation of building type shall insure compatibility of building scale, and overall building appearance in selected areas. Regulation of site design shall address orientation. Such regulation shall also include arrangement of functions within a site, such as parking, loading, waste disposal, access points, outdoor uses and mechanical equipment; and the preservation of site characteristics such as topography, natural features and tree canopy.

The proposed land use change is also consistent with Policy 10.3.1 of the Transportation Mobility Element.

Transportation Mobility Element

Policy 10.3.1 Within the transect zoning districts, land development regulations shall address urban form in terms of: street types, maximum block perimeter sizes, required new streets or urban walkways, building frontage requirements, building setbacks, location of parking, glazing requirements, building façade articulation, and building entrance location.

See Exhibit A-1 - Comprehensive Plan - Transportation Mobility Element GOPs, for other transportation-related policies relevant to this proposed amendment.

2. Compatibility and Surrounding Land Uses

The proposed UMUH land use is compatible with the adjacent mixed-use and adjacent or proximate multi-family land use, and with the overall surrounding urbanized area. Compatibility with adjacent (and non-adjacent but nearby) single-family land use will be assured by meeting all applicable requirements of the Land Development Code, including Section 30-4.8 (Development Compatibility) provisions, required setbacks, height limitations, landscape buffers, and lighting and noise regulations. See Table 1 on Page 2 for a tabular summary of adjacent existing uses and adjacent zoning and land use categories.

3. Environmental Impacts and Constraints

A November 14, 2017 e-mail from Andy Renshaw of the City of Gainesville Public Works Department, Floodplain Management Services stated that:

The property is entirely in FEMA Special Flood Hazard Area (SFHA) zone A (Annual 1% Chance – 100 Year zone) per FEMA Flood Insurance Rate Map (FIRM) dated June 16, 2006. However, in 2005 the City of Gainesville contracted for a new flood study for the Tumblin Creek Watershed. The completed analysis was sent to FEMA as part of the application to revise the flood map for Tumblin Creek, and is under FEMA Case # 06-04-BD54P. Using the data from the new study, the community determined a 100 year Base Flood Elevation (BFE) for the parcel is 86.09 feet NAVD of 1988. This new study effectively places the SFHA Zone A within the southern 90 feet of the parcel. The new study data is what would be used for any City of Gainesville permitting or regulatory action concerning flood zones.

Please see Exhibit B-4 – Map: FIRM (Flood Insurance Rate Map).

The City's Environmental Coordinator, Mark Brown, PWS, CPSS, provided a comprehensive memorandum dated October 31, 2017 (See Exhibit B-5 - Memorandum from the City's Environmental Coordinator). Key excerpts from Mr. Brown's memorandum follow.

The subject property has been reviewed for considerations relating to the presence of environmental resources regulated through the City's Land Development Code (LDC), Article VIII, *Division 3 - Natural and Archaeological Resources* and *Division 4 - Surface Waters and Wetlands*. Environmental evaluations have been conducted and reported by CHW and ERC. The subject property is dominated by a scattered canopy of oak species over maintained lawns associated with residential structures. There are no observed or documented environmental resources that require protection per LDC-Division 3 criteria.

In association with *Division 4* criteria, Tumblin Creek is located along the southern limits of Phase II. The existing channel of Tumblin Creek is the result of historic mechanical excavation predominantly within the historic creek channel. Site review confirmed the presence of a remnant small channel adjacent to the existing dredged creek channel. Although this small channel represents a remnant of the historical creek and even though it hasn't functioned as a creek in decades, there are features and components of note along the limits of the existing and historic channels.

The design of the adjacent Phase I of The Nine required a minimum 35 ft. buffer from the top-bank associated with Tumblin Creek. In comparing creek-side conditions at the two phases, there is an increased risk of potential creek erosion at the Phase II subject site. As a result, it has been recommended to CHW and ERC that Phase II design plans incorporate a minimum 50 ft. buffer setback from the delineated jurisdictional limits of Tumblin Creek for proposed construction activities and/or any associated structures. By retaining this buffer distance, the referenced remnant creek channel and many of the larger canopied trees can be preserved that in turn will further protect wetland habitat and slope conditions associated with Tumblin Creek. Depending on other components of the

proposed Phase II design, incorporating this recommended condition may adequately and appropriately address requirements associated with LDC-*Division 4* criteria.

4. Support for Urban Infill and/or Redevelopment

This proposed small-scale land use amendment is consistent with the City's infill and redevelopment goals, which include discouragement of the proliferation of urban sprawl (Future Land Use Element Objectives 1.5 and 2.1, see page 4 of this report). The proposed change from Single-Family to Urban Mixed-Use High Intensity will provide increased infill and redevelopment opportunities by establishing a land use category that substantially increases the allowable residential density and allows for non-residential use where none is currently allowed.

5. Impacts on Affordable Housing

This proposed land use amendment will increase the allowable residential density and therefore may increase the supply of potential affordable housing in the City.

The proposed small-scale land use amendment may have a positive impact on the supply of potential affordable housing in the City. The proposed UMH land use category will increase the potential for future residential development for this 1.48-acre parcel that currently has Single-Family land use. The proposed UMH land use will allow for a potential maximum density by right of 100 units per acre (additional 25 units per acre by special use permit) rather than the potential maximum of 8 units per acre under the current Single-Family (SF) land use.

6. Impacts on the Transportation System

There are no major transportation issues associated with the proposed small-scale land use change for this developed site that is located within Zone A of the Gainesville Transportation Mobility Program Area (TMPA) and is proximate to (within 1,000 feet) of the University of Florida/UF Health campus. The University of Florida/Shands/VA Hospital is an Existing Transit Hub (see Exhibit B-6 for map of Existing Transit Hubs & Transit-Supportive Areas, which is from the Transportation Mobility Map Series of the Comprehensive Plan).

This 1.48-acre property on the south side of SW 11th Avenue (local street with sidewalks on both sides) and the west side of SW 11th Terrace (local street with sidewalk on one side) is accessible by transit, bicycle and walking from SW 13th ST/US 441 (four-lane arterial roadway with bicycle lanes and sidewalks on both sides) to the west.

Transit service along nearby SW 13th Street/US 441 property is provided 7 days per week by the following RTS Routes:

- Route 8 (Shands to North Walmart Super Center),
- Route 13 (Beaty Towers to Cottage Grove Apartments), and
- Route 16 (Beaty Towers to Sugar Hill).

Monday-Friday transit service (no weekend service) along SW 13th Street/US 441 is provided by RTS Route 17 (Beaty Towers to Rosa Parks RTS Downtown Station).

The City rescinded transportation concurrency with the adoption of its updated Comprehensive Plan. Therefore, development within TMPA Zone A is not required to meet level of service (LOS) requirements for concurrency, but is required to comply with the TMPA Zone A requirements of Policies 10.1.3 and 10.1.4 of the Transportation Mobility Element (see Exhibit A-1, Comprehensive Plan GOPs).

The proposed land use change from Single-Family (up to 8 units per acre) (SF) to Urban Mixed-Use High Intensity: 10-100 units per acre; and up to 25 additional units per acre by Special Use Permit (UMUH) increases the allowable maximum density, allows for non-residential development, and increases the number of trips generated by future development.

In The Nine Phase II – Level of Service Addendum (see [Exhibit C-2 - LOS Addendum](#)), the applicant has estimated the net (relative to the 5 single-family units possible with Single-Family land use for the 1.48-acre property) trip generation for hypothetical development scenarios consisting of 148 multi-family residential units (518 persons based on 3.5 bedrooms per unit) without a non-residential component (Table 1), and with a non-residential component of 5,000 square feet of specialty retail development (Table 2). The net PM peak hour trips are estimated to be 202 for multi-family development alone, and 216 for multi-family and non-residential development combined. The respective, net AADT (Average Annual Daily Trips) are 1,667 and 1,889 trips. Planning staff has reviewed the potential net trip generation and found it to be acceptable.

Table 1: Potential Net Trip Generation (Multi-Family Development)

Category ¹	Units	AADT		A.M. Peak Hour		P.M. Peak Hour	
		Rate	Trips	Rate	Trips	Rate	Trips
Existing							
Single-Family Residential (ITE 210)	5	9.52	48	0.75	4	1.00	5

2. *Note: As discussed with City staff, an average of 3.5 bedrooms per unit is utilized for the trip generation estimates*

7. Availability of Facilities and Services

This property is not currently served by water and wastewater utilities, but it is in an urbanized area that is served by public utilities and other public services.

In November 2, 2017 memorandum, Neal Beery, GRU Technical Support Specialist III stated that:

The lots referenced in this petition are currently served by water or wastewater utilities, and additional utilities can be made available. According to GRU policy, the developer of the property will be responsible for the cost of extending water and wastewater service connections and for any off-site system improvements that may be necessary to provide service. An allowance to provide water supply capacity for future population growth is included in GRU's Consumptive Use Permit. No issues with providing sufficient water supply capacity or impacts due to the proposed land use are anticipated at this time, but this statement does not constitute a reservation or guarantee of water supply to the property.

A School Capacity Review for this land use amendment was provided in a letter dated November 14, 2017 from the Alachua County Public Schools (see [Exhibit B-7](#) for Letter from Alachua County Public Schools) that assessed the potential impact of the proposed land use amendment upon school capacity.

With respect to future residential development within the property, this proposed comprehensive plan amendment could potentially impact adopted levels of service for recreation (specifically for: Community Parks, which have an existing LOS of 2.13 acres and an adopted LOS Standard of 2.00 acres per 1,000 people; and, Neighborhood Parks, which have an adopted LOS standard of 0.80 acres per 1,000 people, and an existing LOS of 1.33 acres). However, recreation LOS will be reviewed for concurrency at the time of development plan review, and all applicable concurrency requirements will have to be met at the time of development plan approval.

The proposed land use change will not impact adopted levels of service for potable water, wastewater water supply, or solid waste, all of which will be reviewed for concurrency at the time of development plan review.

Stormwater level of service requirements will have to be met when a development plan for the property is submitted.

8. Need for the Additional Acreage in the Proposed Future Land Use Category.

The proposed small-scale land use amendment will add 1.48 acres to the Urban Mixed-Use High Intensity (UMUH) land use category. There are currently 489.86 acres of land with the UMU-1 land use category, of which 72.12 acres are vacant. This proposed amendment of the Future Land Use Map will promote infill development and redevelopment and will increase the potential for future mixed-use (residential and non-residential) development proximate to a major arterial roadway (SW 13th ST/US 441) and to the University of Florida, the UF Health hospitals, and the Veterans Administration hospital.

9. Discouragement of urban sprawl as defined in Section 163.3164, F.S., and consistent with the requirements of Subsection 163.3177(6) (a) 9, F.S.

Sub-section 163.3164 (51), F.S. states that “Urban sprawl” means a development pattern characterized by low density, automobile-dependent development with either a single use or multiple uses that are not functionally related, requiring the extension of public facilities and services in an inefficient manner, and failing to provide a clear separation between urban and rural uses. Sub-section 163.3177(6) (a) 9 requires that the future land use element and any amendment to the future land use element shall discourage the proliferation of urban sprawl.

This amendment to the future land use element discourages the proliferation of urban sprawl because it meets the following criteria of Sub-section 163.3177(6) (a) 9 b.:

- (I) Directs or locates economic growth and associated land development to geographic areas of the community in a manner that does not have an adverse impact on and protects natural resources and ecosystems.

Yes. The proposed land use amendment will encourage redevelopment of a property in a centrally located, urbanized area. The property has regulated trees, minor wetlands, and surface waters associated with Tumblin Creek. Additional evaluation will be required at the time of development plan review. Please see Exhibit B-5 – Memorandum from the City’s Environmental Coordinator.

- (II) Promotes the efficient and cost-effective provision or extension of public infrastructure and services.

Yes. This developed property is in an urbanized area that is served by public utilities and other public services.

The property is served by SW 11th Avenue (a 2-lane local street) which intersects SW 13th Street/US 441 (4-lane arterial roadway) to the west, and by SW 11th Street (2-lane local street) to the east and which connects to SW Depot Avenue to the north. It is located in Transportation Mobility Program Area (TMPA) Zone A. Transit service along nearby SW 13th Street/US 441 is provided by four RTS routes.

- (III) Promotes walkable and connected communities and provides for compact development and a mix of uses at densities and intensities that will support a range of housing choices and a multimodal transportation system, including pedestrian, bicycle, and transit, if available.

Yes. The proposed land use amendment to UMUH will increase the redevelopment potential of this urban infill site that is proximate to substantial multi-family residential development to the north, south, and west. It will promote connected and walkable communities and compact development by allowing a mix of uses at a location that is served by nearby (SW 13th ST/US 441) transit, bicycle lanes and sidewalks, and by adjacent sidewalks along SW 11th Avenue and SW 11th Terrace.

The property is served by four RTS routes along SW 13th Street/US 441, which has bicycle lanes and sidewalks on both sides. Pedestrian access to SW 13th Street from the subject property will be provided by sidewalks along SW 11th Avenue.

- (VII) Creates a balance of land uses based upon demands of the residential population for the nonresidential needs of an area.

Yes. The proposed UMUH land use designation allows for a mix of nonresidential and residential uses. This proposed mixed use category for this property can help meet the nonresidential needs of the residents of this populous central part of the urbanized area. It can also help meet the demand for housing in this area by allowing for future residential development.

10. Need for job creation, capital investment, and economic development to strengthen and diversify the City's economy; and,

The proposed land use amendment will substantially increase the potential for redevelopment of this centrally located property, which is supportive of the City's economic development goals of encouraging redevelopment and infill development.

11. Need to modify land use categories and developmental patterns within antiquated subdivisions as defined in Section 163.3164, F.S.

This is not applicable because the property is not within an antiquated subdivision.

Transportation Mobility Element

Policy 2.1.2 The City shall promote transportation choice, healthy residential and non-residential development, safety, and convenience.

Objective 7.1 Provide multi-modal opportunities and mixed-use development areas to reduce single-occupant automobile trips and reduce vehicle miles traveled.

Policy 10.1.2 All land uses and development located in the TMPA shall meet the TMPA policies specified in this Element.

Policy 10.1.3 Zone A shall promote redevelopment and infill in the eastern portion of the City and the area near the University of Florida. Except as shown in Policy 10.1.4 and Policy 10.1.14, funding for multi-modal transportation in Zone A shall be provided to the maximum extent feasible by the City, Community Redevelopment Agency, federal or state governments, and other outside sources such as grant funds.

Policy 10.1.4 For any development or redevelopment within Zone A, the developer shall provide the following transportation mobility requirements. The developer shall provide any transportation modifications that are site related and required for operational or safety reasons, such as, but not limited to, new turn lanes into the development, driveway modifications, or new traffic signals, and such operational and safety modifications shall be unrelated to the Transportation Mobility Program requirements.

- a. Sidewalk connections from the development to existing and planned public sidewalk along the development frontage;
- b. Cross-access connections/easements or joint driveways, where available and economically feasible;
- c. Deeding of land or conveyance of required easements along the property frontage to the City, as needed, for the construction of public sidewalks, bus turn-out facilities, and/or transit shelters. Such deeding or conveyance of required easements, or a portion of same, shall not be required if it would render the property unusable for development. A Transit Facility License Agreement between the property owner and the City for the placement of a bus shelter and related facilities on private property may be used in lieu of deeding of land or conveyance of easements. The License Agreement term shall be for a minimum of 10 years;
- d. Closure of existing excessive, duplicative, or unsafe curb cuts or narrowing of overly wide curb cuts at the development site, as defined in the Access Management portion of the Land Development Code; and

- e. Safe and convenient on-site pedestrian circulation, such as sidewalks and crosswalks connecting buildings and parking areas at the development site.

Policy 10.1.14 Within the portion of the University of Florida (UF) Context Area that is located inside city limits (as mapped in the Campus Master Plan), all new multi-family residential development shall fund the capital transit costs associated with transit service needs. Transit capital costs include transit vehicles, maintenance facilities, passenger facilities such as transit shelters, and technology equipment (such as GPS). Payments shall be based on a proportionate share contribution for any additional transit service enhancements needed to serve the proposed development and maintain existing service levels (frequencies) in the RTS a.m. and p.m. peak hours. The projected new trips shall be based on the expected mode split of all development trips that will use transit. If the development is within ¼ mile of UF, there shall be a 25% reduction in the required payment in recognition of the pedestrian and bicycle trips that may occur. Any transit payments required under this policy shall not count towards meeting TMPA criteria in Zones B, C, D, or M.

Policy 10.1.20 The City may require special traffic studies within the TMPA, including, but not limited to, information about trip generation, trip distribution, trip credits, and/or signal warrants, to determine the need for transportation modifications for improved traffic operation and/or safety on impacted road segments.

Policy 10.2.5 In order to encourage the redevelopment of properties within the TMPA, reduce or prevent blight, and encourage development in close proximity to transit, the following redevelopment trip credits shall apply to projects that are located within ¼ mile of the property lines of an existing transit hub or projects that are located in transit-supportive areas (as shown in the Existing Transit Hubs and Transit-Supportive Areas Map adopted in the Transportation Mobility Element) and are within ¼ mile of an existing transit route. The City shall reduce by 25% the net, new average daily trip generation for any redevelopment project or any project that expands or converts a building to a new use. The City shall reduce by 40% the net, new average daily trip generation for any mixed-use project that includes both a residential and non-residential component where residential dwelling units equal at least 10% of the floor area of commercial/office uses.

Objective 10.3 The City's Land Development Code shall provide standards for all new developments and redevelopment within the TMPA. Within the transect zoning district areas, the Land Development code shall regulate urban form to ensure a compact, pedestrian-friendly environment that supports multi-modal opportunities.

DATE: October 31, 2017

SUBJECT: Environmental Memorandum
Petition – The Nine Phase 2 –
Small-scale Comprehensive Plan Amendment (Ss-CPA) and Rezoning Applications
1135 SW 11th Avenue, (PB-17-114 LUC, PB-17-115 ZON)

The subject CPA application requests to change the Single Family (SF) Future Land Use (FLU) designation to Urban Mixed-Use High Intensity (UMUH). The rezoning application requests changing the zoning designation from Single-Family Residential (RSF-1) to Urban 9 (U9). The project site (Alachua County Tax Parcel 15601-034-000) is 1.4 acres and located adjacent to the eastern boundary of The Nine – Phase I (aerial figure below, red line).

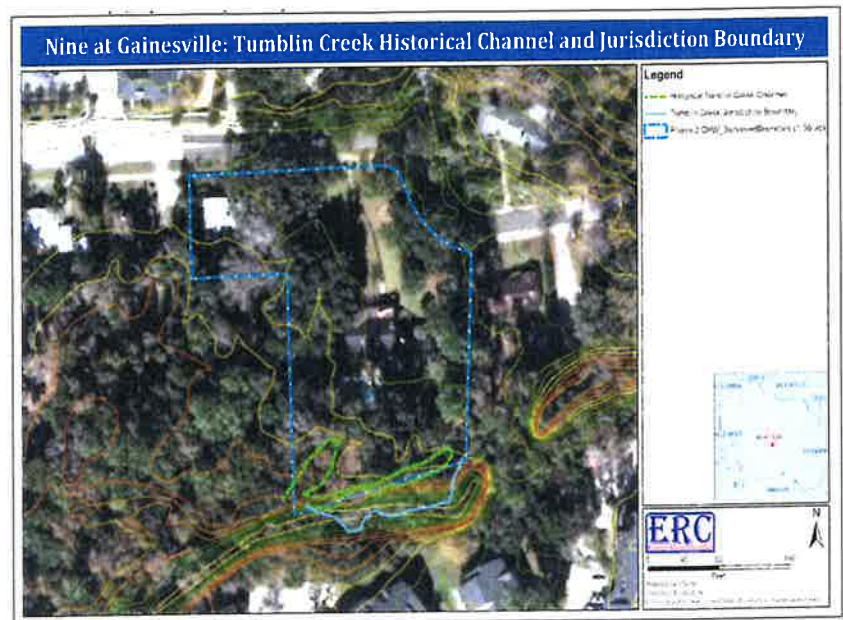

The subject property has been reviewed for considerations relating to the presence of environmental resources regulated through the City's Land Development Code (LDC), Article VIII, **Division 3 - Natural and Archaeological Resources** and **Division 4 - Surface Waters and Wetlands**. Environmental evaluations have been conducted and reported by CHW and ERC. The subject property is dominated by a scattered canopy of oak species over maintained lawns associated with residential structures. There are no observed or documented environmental resources that require protection per LDC-Division 3 criteria.

In association with Division 4 criteria, Tumblin Creek is located along the southern limits of Phase II (right figure). The existing channel of Tumblin Creek is the result of historic mechanical excavation predominantly within the historic creek channel. Site review confirmed the presence of a remnant small channel adjacent to the existing dredged creek channel;

depicted as a green dashed-line on the figure below. Although this small channel represents a remnant of the historical creek and even though hasn't functioned as a creek in decades, there are features and components of note along the limits of the existing and historic channels:

- The remnant channel is only 15-20 feet north of the top-of-bank associated with Tumblin Creek (blue line on figure).
- As a result of past excavations, the existing Tumblin Creek channel and associated wetland habitat has sheer vertical sideslopes; dropping 4-5 feet from the top-of-bank.
- There is substantial coverage of large canopied trees present between the two channels, as well as along the northern limits of the historic channel. Several of these trees are regulated per Article VIII, ***Division 2 – Trees and Landscape***.
- With undulating topography adjacent to the two channels, the extensive tree canopy and dense ground cover vegetation are critical components retaining soil and slope stabilization.

The design of the adjacent Phase I of The Nine required a minimum 35 ft. buffer from the top-bank associated with Tumblin Creek. In comparing creek-side conditions at the two phases, there is an increased risk of potential creek erosion at the Phase II subject site. As a result, it has been recommended to CHW and ERC that Phase II design plans incorporate a minimum 50 ft. buffer setback from the delineated jurisdictional limits of Tumblin Creek for proposed construction activities and/or any associated structures. By retaining this buffer distance, the referenced remnant creek channel and many of the larger canopied trees can be preserved that in turn will further protect wetland habitat and slope conditions associated with Tumblin Creek. Depending on other components of the proposed Phase II design, incorporating this recommended condition may adequately and appropriately address requirements associated with LDC-Division 4 criteria.

RE: **Petition PB-17-28 LUC / PB-17-115 ZON.** Review of Comprehensive Plan Amendment and rezoning including a net increase of 87 multi-family dwelling units on 1.48 acres.

Dear Mr. Mimms:

A School Capacity Review for the above referenced project has been completed. The review was conducted in accordance with the City of Gainesville Public School Facilities Element as follows:

POLICY 1.1.2: Coordinating School Capacity with Planning Decisions

The City shall coordinate land use decisions with the School Board's Long Range Facilities Plans by requesting School Board review of proposed comprehensive plan amendments and rezonings that would increase residential density. This shall be done as part of a planning assessment of the impact of a development proposal on school capacity.

POLICY 1.1.3: Geographic Basis for School Capacity Planning.

For purposes of coordinating land use decisions with school capacity planning, the SCSAs that are established for high, middle and elementary schools as part of the Interlocal Agreement for Public School Facility Planning shall be used for school capacity planning. For purposes of this planning assessment, existing or planned capacity in adjacent SCSAs shall not be considered.

POLICY 1.1.5: SBAC Report to City

The School Board shall report its findings and recommendations regarding the land use decision to the City. If the SBAC determines that capacity is insufficient to support the proposed land use decision, the SBAC shall include its recommendations to remedy the capacity deficiency including estimated cost and financial feasibility. The School Board shall forward the Report to all municipalities within the County.

POLICY 1.1.6 City to Consider SBAC Report

The City shall consider and review the School Board's comments and findings regarding the availability of school capacity in the evaluation of land use decisions

This review does not constitute a “concurrency determination” and may not be construed to relieve the development of such review at the final subdivision or final site plan stages as by the City of Gainesville Comprehensive Plan. It is intended to provide an assessment of the relationship between the project proposed and school capacity – both existing and planned.

The **Petition PB-17-28 LUC / PB-17-115 ZON** represents a net increase of 87 multi family units.

Table 1: Petition PB-17-28 LUC / PB-17-115 ZON – Projected Student Generation at Buildout

	Elementary	Middle	High	Total
Single Family	0			
Multiplier	0.15	0.070	0.09	0.31
Students	0	0	0	0
Multi Family				
Multiplier	.08	.03	.03	0.14
Students	7	3	3	13
Total Students*	7	3	3	13

Elementary Schools. **Petition PB-17-28 LUC / PB-17-115 ZON** is situated in the Gainesville East Alachua Concurrency Service Area. The Gainesville East Alachua Concurrency Service Area currently provides a capacity of 8,049 seats. The current enrollment 7,243 students representing a 90% utilization compared to an adopted LOS standard of 100%. Utilization is projected to be 88% in 2021 and 89% in 2026.

Student generation estimates for the **Petition PB-17-28 LUC / PB-17-115 ZON LUC** indicate that 7 elementary seats would be required at buildout. This additional enrollment can be reasonably accommodated during the five, ten and twenty year planning period.

Middle Schools. The **Petition PB-17-28 LUC / PB-17-115 ZON** is situated in the Lincoln Concurrency Service Area. The Lincoln Concurrency Service Area provides a capacity of 1,077 seats. The current enrollment is 701 students representing an 67% utilization compared to an adopted LOS standard of 100%. Utilization is projected to be 68% by 2021 and 67% in 2026.

No new capacity is planned for the Lincoln Concurrency Service Area during the five, ten and twenty year planning periods.

Student generation estimates for the **Petition PB-17-28 LUC / PB-17-115 ZON** indicate that 3 middle seats would be required at buildout. Capacity and level of service projections indicate that this demand can be reasonably accommodated during the five, ten and twenty year planning period.

High Schools. The **Petition PB-17-28 LUC / PB-17-115 ZON** is situated in the Eastside Concurrency Service Area. The Eastside Concurrency Service Area currently has a capacity of 2,149 seats. The current enrollment is 1,355 students representing a 63% utilization compared to an adopted LOS standard of 100%. Utilization is projected to reach 68% by 2021 and 70% by 2026

Student generation estimates for the **Petition PB-17-28 LUC / PB-17-115 ZON** indicate that 3 high school seats would be required at buildout. Capacity and level of service projections indicate that this demand can be reasonably accommodated during the five, ten and twenty year planning period.

Summary Conclusion. Students generated by the **Petition PB-17-28 LUC / PB-17-115 ZON** at the elementary, middle and high levels can be reasonably accommodated for the five, ten and twenty year planning periods.

This evaluation is based on best projections and upon the 2017-2018 Five Year District Facilities Plan adopted by the School Board of Alachua County. The **Petition PB-17-28 LUC / PB-17-115 ZON** project is subject to concurrency review and determination at the final site plan for multi-family and the availability of school capacity at the time of such review.

If you have any questions, please contact this office.

Re: The Nine Phase 2 –
 Small-scale Comprehensive Plan Amendment (Ss-CPA) and Rezoning Applications
 (Tax Parcel No. 15601-034-000)
 Gainesville, Florida

Dear Forrest,

On behalf of 908 Development Group, CHW submits 7 copies of the Ss-CPA and Rezoning applications, which include the following items:

- The required City of Gainesville Ss-CPA and Rezoning applications;
- Property Owner Affidavits; and
- Justification Reports summarizing the applications' request, estimating public facility impacts, and stating Comprehensive Plan and Land Development Code (LDC) consistency; and
- Other supporting information for each application.

Also submitted with each application is a CD-ROM with all application materials, and the following application fees:

- Check No. 100227 for Ss-CPA: \$1,736.50;
- Check No. 100226 for Rezoning: \$3,229.75.

The Ss-CPA application requests to change the Urban Mixed-Use High-Intensity (UMUH) Future Land Use (FLU) designation to Urban Mixed-Use High Intensity and the Rezoning application requests changing the zoning designation from Single-Family Residential (RSF-1) to Urban 9 (U9). The project site is located on Alachua County Tax Parcel 15601-034-000, a ±1.48-acre site adjacent to The Nine Phase I's eastern property boundary. The applications' intent is to permit a second phase to The Nine apartments.

Adjacent uses consist of both multi- and single-family residences. Approval of these applications will increase density in an urban environmental that has direct access to RTS (transit) and bike/ped systems that connect to UF Health, UF's main campus, and downtown. Accompanying these applications is a memorandum from Ecosystems Research Corporation (ERC), which consists of a preliminary evaluation of Tumblin Creek, which is located along the site's southern property boundary, and the site's other natural features.

We trust this submittal will be sufficient for your review and subsequent approval by the City Plan Board and City Commission. If you have any questions or need additional information, please call me at (352) 331-1976.

Sincerely,
 CHW

 Ryan Thompson, AICP
 Project Manager

Mailed Memorandum

MEMORANDUM

TO: Neighbors of SW 13th Street / SW 11th Avenue Area
FROM: Ryan Thompson, AICP
DATE: Wednesday, September 13, 2017
RE: Neighborhood Workshop Notice

A Neighborhood Workshop will be held to discuss a proposed Small-scale Comprehensive Plan Amendment and Rezoning for a ±1.72-acre site on Alachua County Tax Parcels 15600-029-000 and 15601-034-000. The request is to change the Future Land Use Map designation from Single-Family (up to 8 units / acre) to Urban Mixed-Use High Intensity (8-75 units / acre) and Zoning from Single-Family Residential (RSF-1) to Urban Mixed-Use High. The intent is to construct a second phase to The Nine apartment complex.

Date: Wednesday, September 27, 2017
Time: 6:00 p.m.
Place: Wyndham Garden Gainesville, Board Room
2900 SW 13th Street
Gainesville, FL 32608
Contact: Ryan Thompson AICP
(352) 331-1976

This is not a public hearing. The purpose of the workshop is to inform neighboring property owners about the nature of the proposal and to seek comments. We look forward to seeing you at the workshop.

Workshop Presentation

The Nine – Phase II
Small-scale Comprehensive
Plan Amendment (Ss-CPA)
& Rezoning Application

Neighborhood Workshop
September 27, 2017

WORKSHOP PURPOSE

- City of **Gainesville** requires **Ss-CPA and Rezoning applicants** to host a neighborhood workshop.
- The workshop's **purpose is to inform neighbors** of the proposed development's nature and to get feedback early in the development process.
- This workshop provides the applicant with an **opportunity to mitigate concerns** prior to the application's submission.

APPLICATION REQUEST & INTENT

Request for Tax Parcel 15601-034-000 (±1.48 ac):

- **Change** the **Future Land Use** Map designation from Single-Family (up to 8 units / acre) to Urban Mixed-Use High-Intensity (8-75 units / acre)
- **Change** the **Zoning** from Single-Family Residential (RSF-1) to Urban 9 (U9)

Intent:

To **permit up to 146 dwelling units onsite** for The Nine – Phase II, a previously-approved multifamily apartment complex.

MEMORANDUM

TO: Neighbors of SW 13th Street / SW 1st Avenue Area
FROM: Ryan Thompson, AICP
DATE: Wednesday, September 13, 2017
RE: Neighborhood Workshop/Notice

A Neighborhood Workshop will be held to discuss a proposed Small-scale Comprehensive Plan Amendment and Rezoning for a ±1.72-acre site on Alachua County Tax Parcels 15601-029-000 and 15601-034-000. The request is to change the Future Land Use Map designation from Single-Family (up to 8 units / acre) to Urban Mixed-Use High-Intensity (8-75 units / acre) and Zoning from Single-Family Residential (RSF-1) to Urban Mixed-Use High. The intent is to conduct a second phase to The Nine apartment complex.

Date: Wednesday, September 27, 2017
Time: 6:00 p.m.
Place: Wyndham Garden Gainesville, Board Room
2900 SW 13th Street
Gainesville, FL 32608
Contact: Ryan Thompson, AICP
(352) 331-1976

This is not a public hearing. The purpose of the workshop is to inform neighboring property owners about the nature of the proposal and to seek comments. We look forward to seeing you at the workshop.

PUBLIC NOTICE

A Neighborhood Workshop will be held to discuss a proposed Small-scale Comprehensive Plan Amendment and Rezoning for a ±1.72-acre site on Alachua County Tax Parcels 15601-029-000 and 15601-034-000. The request is to change the Future Land Use Map designation from Single-Family (up to 8 units / acre) to Urban Mixed-Use High (8-75 units / acre) and change the Zoning from Single-Family Residential (RSF-1) to Urban Mixed-Use High.

This is not a public hearing. The purpose of this workshop is to inform the public about the nature of the proposal and seek their comments.

Time: 6:00pm on Wednesday, September 27, 2017

Location: Wyndham Garden Gainesville, Board Room, 2900 SW 13th Street, Gainesville, FL 32608

The Nine Phase II

Small-scale Comprehensive Plan amendment (Ss-CPA) and Rezoning Applications

September 28, 2017 at 6:00 PM

Wyndham Garden Gainesville Board Room,

2900 SW 13th Street, Gainesville, FL 32608

Recorded and transcribed by CHW staff.

CHW Attendee – Ryan Thompson, AICP

Community Members in Attendance: Two

CHW Staff hosted the required Neighborhood Workshop at the Wyndham Garden. CHW gave a presentation that contained detailed information pertaining to the purpose of the workshop, the application's request and intent, public notification information, the estimated schedule and review process, and various maps illustrating the project site's location and characteristics. Two people, an adjacent homeowner and her brother attended the workshop. Discussion occurred both during a after the presentation. The following is a recount of the discussion, which has been edited for brevity and ease of reading.

Concern: Turning onto SW 11th Avenue from US-441 is a challenge because there is no turn lane and sometimes you must wait extended periods before there is a break in traffic.

Question: Can they put a traffic light at that intersection?

Response: US-441 is maintained by the Florida Department of Transportation (FDOT), who has numerous criteria required prior to permitting an intersection control device, such as a traffic signal. Following the completion of these applications, a development plan will be submitted to the City for review, which will evaluate traffic impacts and required improvements in detail.

Question: Are you doing any traffic studies for these applications?

Response: For the Ss-CPA and Rezoning applications, we are required to look at the number of vehicle trips generated based on the site's maximum development potential. During the development plan stage, traffic is looked at in much more detail, since an actual development is known at that point. Vehicle trip generation is based on the specific number of dwelling units, and is used to determine roadway capacity following the development's completion as well as how those vehicles will be distributed on adjacent streets. The plan will be reviewed by both FDOT and the City Public Works Department.

Question: Is there going to be a driveway connecting to US-441?

Response: No, the Nine Phase I has a driveway on SW 11th Avenue, across from the existing Wildflower Apartments driveway. [Showed plan sheet for Phase I.] In general, FDOT limits the number of driveways to the maximum extent practicable.

Question: Where will the driveway for Phase II be located?

Response: We have not proceeded with the engineering plans, nor have we created conceptual plans for this site. There is a level of risk going through that effort prior to having the appropriate entitlements (land use and zoning) in place beforehand. So, at this point we are not sure where the driveway will be located. Consideration will be made for the existing intersection of SW 11th Avenue, 11th Terrace, and 11th Street.

Concern: I'm concerned that there will be considerably more traffic on SW 11th Terrace, both vehicles and bike/ped. Currently, SW 11th Street, which goes in front of PK Yonge gets backed up during pick-up/drop-off.

Response: How vehicles are distributed to adjacent roads will be evaluated during the development plan application. And, the City Land Development Code (LDC) has thresholds for required roadway improvements that may be required on adjacent roadways. We do not know now what those will be, if any.

Question: Do you know how many units and what type, student or family?

Response: The maximum number of units permitted based on the land area is 146 units. Whether they are able to achieve that number, I don't know. The units could be student apartments, which typically have three to four bedrooms and a common kitchen/family room. This is similar to the Wildflower Apartments across the street.

Concern: Roadway impacts will be much greater if it is student apartments, rather than family.

Question: Do you know what the height will be?

Response: Up to four stories is permitted by right. Five stories can be achieved using the City's height bonus program. Within 100 feet of single-family residential, the building height is limited to three stories.

Question: Will the building be located right on the street like Phase I?

Response: Yes, although we do not have a development plan, I assume the building placement will reflect what is being built in Phase I. The City LDC has specific requirements for landscape, sidewalk, and building zones, which roughly measuring five feet in width each.

The workshop ended at approximately 6:30 pm.

Date: October 2nd, 2017
Re: The Nine Phase II — Ss-CPA Application

#17-0342

<u>Jurisdiction:</u> City of Gainesville	<u>Intent of Development:</u> Multi-family Residential
<u>Location:</u> 1135 SW 11 th Avenue, Gainesville, FL 32601	
<u>Parcel Number:</u> 15601-034-000	<u>Acres:</u> ±1.48 acres (ac) (Source: Alachua County Property Appraiser)
<u>Existing Future Land Use Classifications:</u> <i>SF: Single-Family (up to 8 dwelling units per acre) (du/ac)</i> The Single-Family land use classification identifies those areas within the City that, due to topography, soil conditions, surrounding land uses and development patterns, are appropriate for single-family development. Land development regulations shall determine the performance measures and gradations of density. Land development regulations shall specify criteria for the siting of low-intensity residential facilities to accommodate special need populations and appropriate community-level institutional facilities such as places of religious assembly, public and private schools other than institutions of higher learning, and libraries. Land development regulations shall allow home occupations in conjunction with single-family dwellings under certain limitations.	<u>Proposed Future Land Use Classification:</u> <i>UMUH: Mixed-Use High-Intensity (up to 150 du/ac)</i> This category allows a mixture of residential, office, business uses and light industrial uses concentrated in mapped areas. This category shall also allow traditional neighborhoods on sites 16 acres or larger in conformance with the adopted Traditional Neighborhood Development (TND) ordinance. Public and private schools, institutions of higher learning, places of religious assembly and community facilities shall be appropriate in this category. Such development shall function as a center serving the urban area. When in accord with all other land use regulations, residential densities up to 150 units per acre shall be permitted.

1. Executive Summary

<p><u>Existing Zoning Districts:</u> <i>RSF-1: Single-Family Residential (3.5 du/ac)</i></p> <p>The single-family districts are established for the purpose of providing areas for low density single-family residential development with full urban services at locations convenient to urban facilities, neighborhood convenience centers, neighborhood shopping centers and activity centers. These districts are characterized by single-family residential structures designed and located so as to protect the character of single-family residential neighborhoods.</p>	<p><u>Proposed Zoning District:</u> <i>U9: Urban 9 (100 du/ac)</i></p> <p>The intent of the Transect Districts is to establish development standards that will encourage a more efficient and sustainable urban form by allowing a range of housing, employment, shopping and recreation choices and opportunities in a compact, pedestrian-friendly environment. Urban Zones 6-9 consists of higher density mixed use buildings that accommodate retail, offices, and apartments. It has a tight network of streets, with wide sidewalks, steady street tree planting and buildings set close to the sidewalks.</p>
<p><u>Existing Max. Permitted Density</u> $\pm 1.48 \text{ ac} \times 3.5 \text{ du/ac (RSF-1)} = 5 \text{ du}$</p>	<p><u>Proposed Max. Permitted Density¹</u> $\pm 1.48 \times 100 \text{ du/ac (U9)} = 148 \text{ du}$</p>
<p><u>Net Change</u> This Ss-CPA and concurrent Rezoning application will result in a net increase of 143 dwelling units permitted on the project site.</p>	

1. *Note: Although the U9 district permits both residential and nonresidential uses, this application applies to Phase II of an existing apartment complex. Therefore, only the maximum development potential for residential uses were considered in this request.*

2. STATEMENT OF PROPOSED CHANGE

This Ss-CPA application requests to change the ± 1.48 -acre site's existing FLU designation from Single -Family (SF) to Urban Mixed Use High Intensity (UMUH) on Alachua County Tax Parcel 15601-034-000—consistent with the adjacent parcels to the west. The site is located east of SW 13th Street (US-441) at 1135 SW 11th Avenue and is comprised of one (1) single-family residential lot with an existing home as seen in Figure 1 below:

Figure 1: Aerial Map

This Ss-CPA application is companion to a Rezoning that requests the Urban 9 (U9) Zoning designation on the ± 1.48 -acre site—also consistent with the adjacent parcels to the west. Table 1 shows the relationship between the site and its surrounding FLU and zoning designations.

Table 1: Surrounding Future Land Use and Zoning Designations

Direction	Future Land Use Designation	Zoning Designation
North	SW 11 th Avenue R.O.W.; SF	SW 11 th Avenue R.O.W.; RSF-1
East	SF	RSF-1
South	Urban Mixed-Use (UMU)	Planned Development (PD)
West	UMUH	U9

The Nine Phase I currently resides adjacent to the project site to the west. This Ss-CPA and concurrent Rezoning is being requested to ensure that onsite FLU and zoning will permit the additional multifamily units that are proposed as part of The Nine Phase II. The Nine Phase I is a previously-approved multifamily apartment complex, with a development plan, that is currently in construction at the time of this application's submittal. If this Ss-CPA and concurrent Rezoning is adopted, a development plan for The Nine Phase II will be submitted that seeks to add up to an additional ± 148 multifamily units. Figures 2 through 5 illustrate the proposed changes to existing FLU and Zoning for the ± 1.48 -acre parcel.

Figure 2: Existing Future Land Use Map

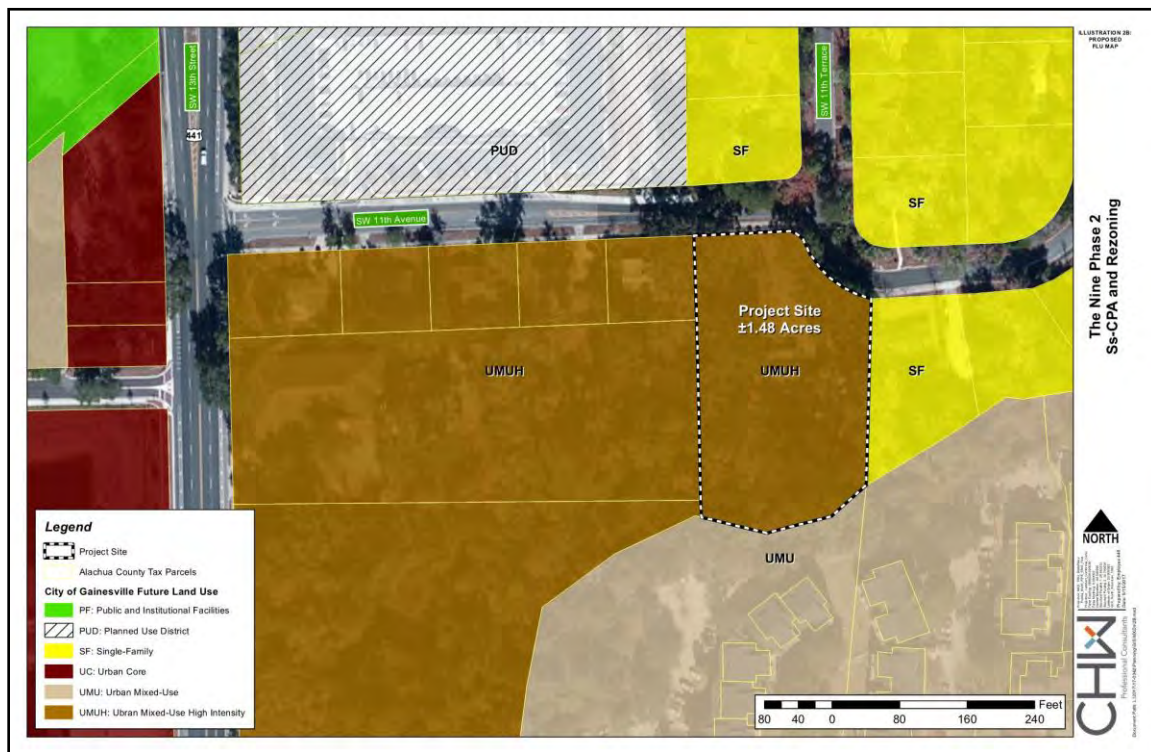

Figure 3: Proposed Future Land Use Map

Figure 4: Existing Zoning Map

Figure 5: Proposed Zoning Map

3. IMPACT ANALYSIS

IMPACT ON RESIDENTIAL STREETS

Approval of these applications and the subsequent development of the project site will have limited impacts on the residential streets to the east. Similar to the multi-family development on the north side of SW 11th Avenue, the majority of project traffic is anticipated to access the project site on 11th Avenue from SW 13th Street. Thus, only a modest percentage of the total estimated trips generated from The Nine Phase II are anticipated to enter into the neighborhood to the east. Additionally, it is anticipated that automobile trips will be minimized due to the project's central location, walkability of the area, and access to public transportation.

IMPACT ON NOISE AND LIGHTING

In addition to the previously-approved The Nine Phase I complex, similar multifamily and multistory uses are located along the SW 13th Street corridor. Appropriate buffers will be provided to minimize impacts to near-by single-family uses and the project's exterior lighting will be in accordance with the City of Gainesville's Land Development Code (LDC) requirements.

ENVIRONMENTAL FEATURES

The project is located in the City of Gainesville's urban, developed area. Tumblin Creek is located to the south of the subject parcel. Onsite buffering and setbacks from Tumblin Creek, if required, will be consistent with City of Gainesville Comprehensive Plan and LDC. Per the National Wetlands Inventory data and the City's Surface Waters and Wetlands District map, there are no identified wetlands on this site. Floodplains located within either Phase of The Nine will be mitigated onsite.

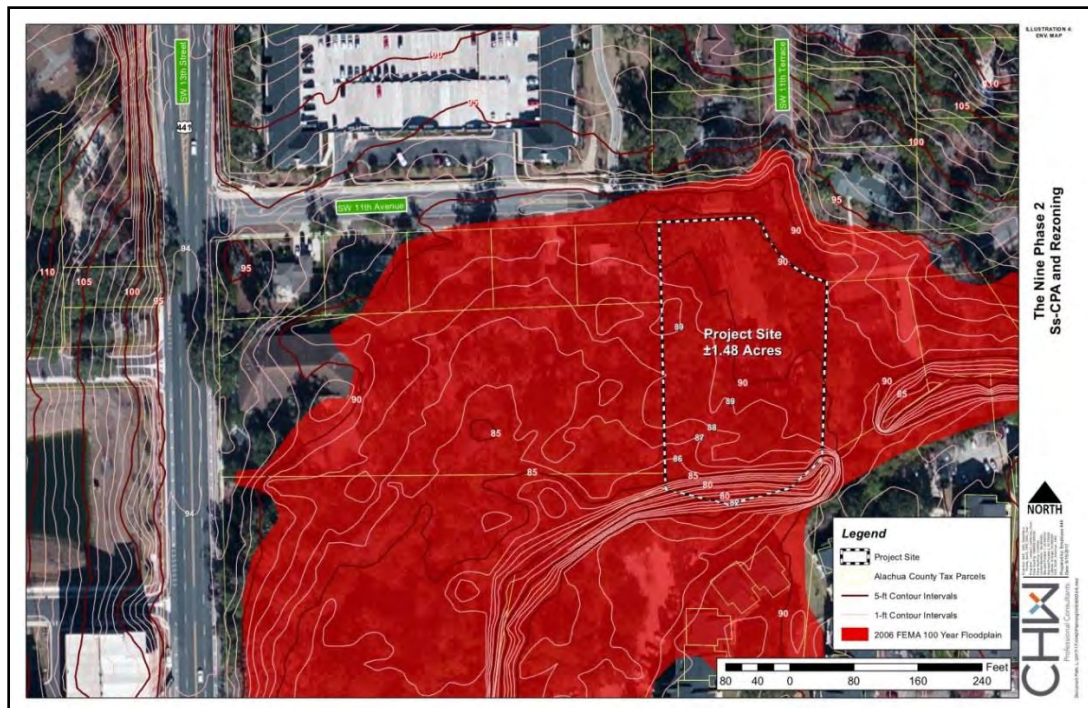

Figure 6: Topography, Wetlands, and FEMA Floodplain Map

According to the National Resources Conservation Service (NRCS) online database, the on-site soil types are Millhopper-Urban Land Complex—0 to 5% slopes and Lochloosa Fine Sand (Figure 7). Both soil types are classified as Hydro Group A which is favorable for urban development. These soil types are present throughout urbanized area of Gainesville and are suitable for urban-type development, as indicated by the existing development on the same soil types nearby.

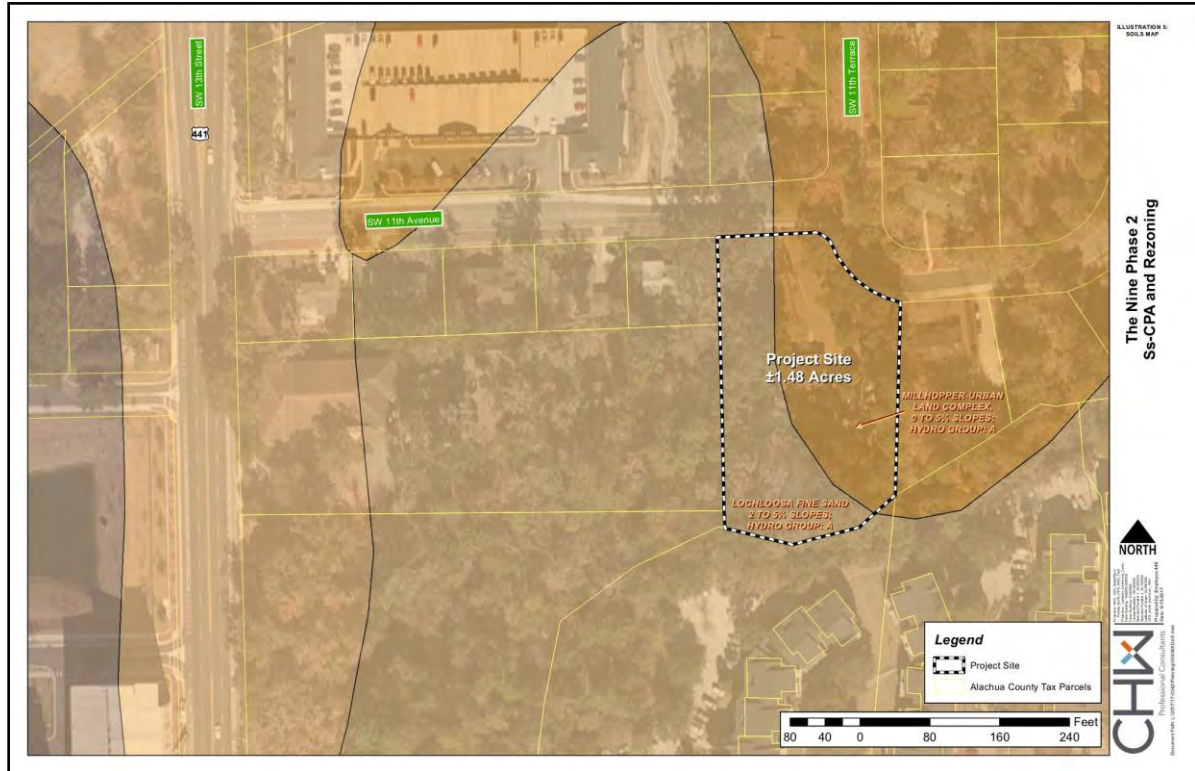

Figure 7: Natural Resources Conservation Service (NRCS) Soils Map

HISTORIC AND ARCHEOLOGICAL RESOURCES

According to the Florida Division of Historical Resources (DHR), no archeological resources are located on the property.

COMMUNITY CONTRIBUTIONS

The proposed Ss-CPA application is consistent with the City of Gainesville Comprehensive Plan. The site's potential development will provide for urban infill within an existing multifamily land development pattern along a major transit route. Urban infill reduces the pressure to develop along the urban area's fringes and reduces the potential for urban sprawl. The intended development of The Nine Phase II will provide urban-scale housing options within walking distance of both the University of Florida's (UF) main campus and health facilities. The requested UMUH FLU designation encourages dense development patterns and the efficient use of land.

POTENTIAL LONG-TERM ECONOMIC BENEFITS

The potential mixed-used development will have positive, long-term impacts to the City's economy and tax base. Approval of this application will permit development that will further increase the city's tax base and density within the urban core.

LEVEL OF SERVICE

The following tables summarize the potential net impacts that may be caused as a result of the proposed Ss-CPA and concurrent rezoning application's approval. While the site's existing SF FLU permits 8 du/ac, the site's current RSF-1 zoning limits onsite density to 3.5 units per acre. In comparison, the proposed UMUH FLU for the project site allows up 150 du/ac, and the requested U9 zoning only caps onsite density at 100 du/ac.

The potential net impacts from the proposed Ss-CPA and Rezoning are not anticipated to cause public facilities to operate below the City's adopted LOS standards. Level of Service (LOS) standards were calculated based on the net density increases that may result from a multi-family residential project if developed at the site's maximum permitted density.

Existing FLU / Zoning Max. Permitted Density: $\pm 1.48 \text{ ac} \times 3.5 \text{ du/ac (RSF-1)} = 5 \text{ du total}$

Proposed FLU / Zoning Max. Permitted Density: $\pm 1.48 \times 100 \text{ du/ac (U9)} = 148 \text{ du total}$

Roadways / Transportation

Table 2: Projected Net Trip Generation

Land Use ¹	Units	Daily		AM Peak		PM Peak	
(ITE)		Rate ¹	Trips	Rate ¹	Trips	Rate ¹	Trips
Proposed							
Apartment (ITE 220)	148	6.65	984	.55	81	.67	99
Existing							
Single-Family Detached Housing (ITE 210)	-5	9.52	-48	.77	-4	1.02	-5
Net Demand	-	-	936		77		94

1. Source: ITE Trip Generation Manual, 9th Edition

Conclusion: If the project were to be developed utilizing the site's maximum development potential, this Ss-CPA and concurrent Rezoning application's approval would result in a potential increase of **936 net daily vehicle trips**.

The site is located within the City's Transportation Mobility Program Area (TMPA) Zone A. Developments within TMPA Zone A are responsible for providing transportation improvements that are required due to safety and/or operational conditions. Development within TMPA Zone A will be required to provide items a. – e. identified in the City's Comprehensive Plan, Transportation Mobility Element Policy 10.1.4.

- Sidewalk connections to existing and planned public sidewalk;
- Cross-access connections/easements or joint driveways;
- Deeding of land or conveyance of required easements along the property frontage to the City, as needed, for the construction of public sidewalks, bus turn-out facilities and/or bus shelters;
- Closure of existing excessive, duplicative, or unsafe curb cuts or narrowing of overly wide curb cuts at the development site; and
- Provide safe and convenient on-site pedestrian circulation.

The proposed redevelopment allows residents and employees to have walking access to the Regional Transit System's numerous bus routes that can provide residents access to commercial and institutional uses along US-441 without the use of a personal vehicle. Urban infill along existing bus routes is consistent with the City's and RTS's long term plans and policies.

Potable Water

Based on Figure 8, a map provided by Gainesville Regional Utilities (GRU), potable water infrastructure is available to the site. Connection to the project site will either stem from an extension of the existing 12" Cast Iron Pipe (CIP) water main currently serving The Nine Phase I to the west or from the existing 8" Ductile Iron Pipe (DIP) water main that serves the onsite single-family home.

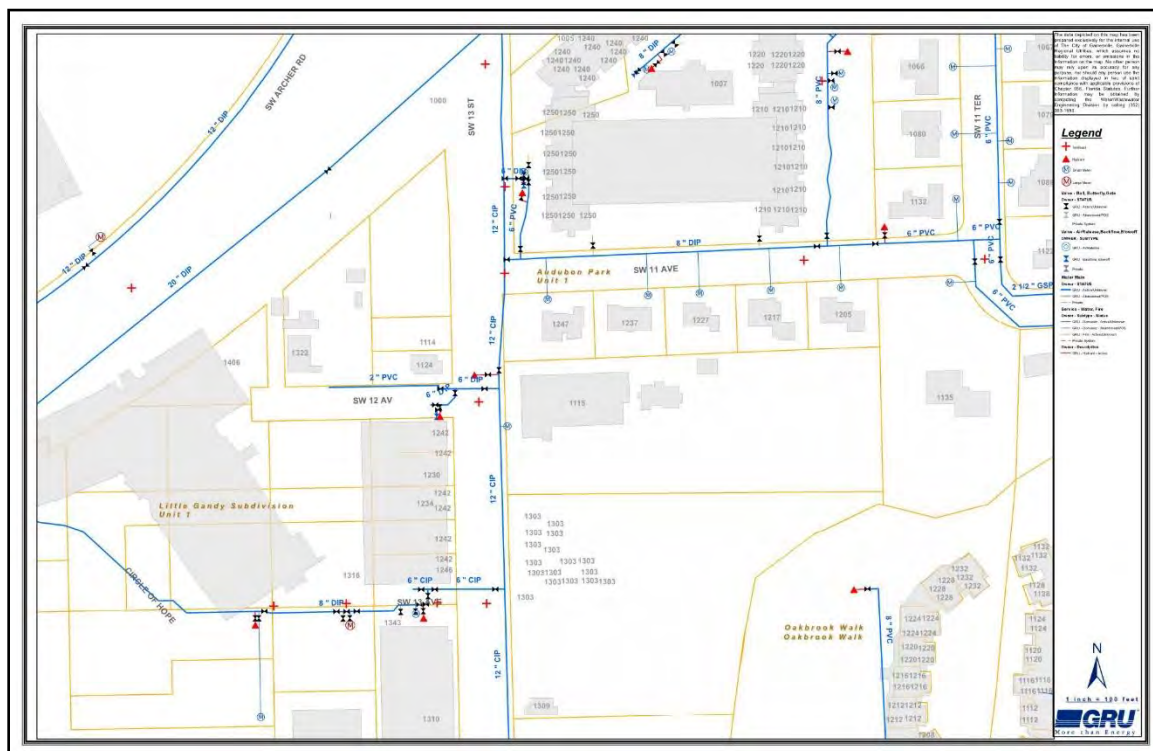

Figure 8. Existing Potable Water Infrastructure

Table 3: Projected Potable Water Demand

Land Use ¹	Maximum Units	Generation Rate ²	Estimated Demand (GPD)
Proposed			
Apartment (ITE 220)	148	200 gal/person/day (2.2 persons per household)	65,120
Existing			
Single-Family Detached Housing (ITE 220)	-5	200 gal/person/day (2.2 persons per household)	-2,200
Net Demand	-	-	62,920

1. Source: ITE Trip Generation Manual, 9th Edition

2. Source: City of Gainesville Comprehensive Plan, Potable Water & Wastewater Element

Conclusion: As shown in Figure 8, the project site will be served by existing Gainesville Regional Utilities potable water infrastructure. If the project were to be developed utilizing the site's maximum development potential, approval of this request would result in a potential increase of **62,920 gallons per day** in estimated onsite potable water demand and *would not* negatively impact the adopted LOS.

Sanitary Sewer

Based on Figure 9, a map provided by Gainesville Regional Utilities (GRU), sanitary sewer infrastructure is available to the site. Connection to the project site will either stem from an extension of the existing gravity main currently serving The Nine Phase I or from the gravity main found in the SW 11th Avenue R.O.W. that serves the onsite single-family home.

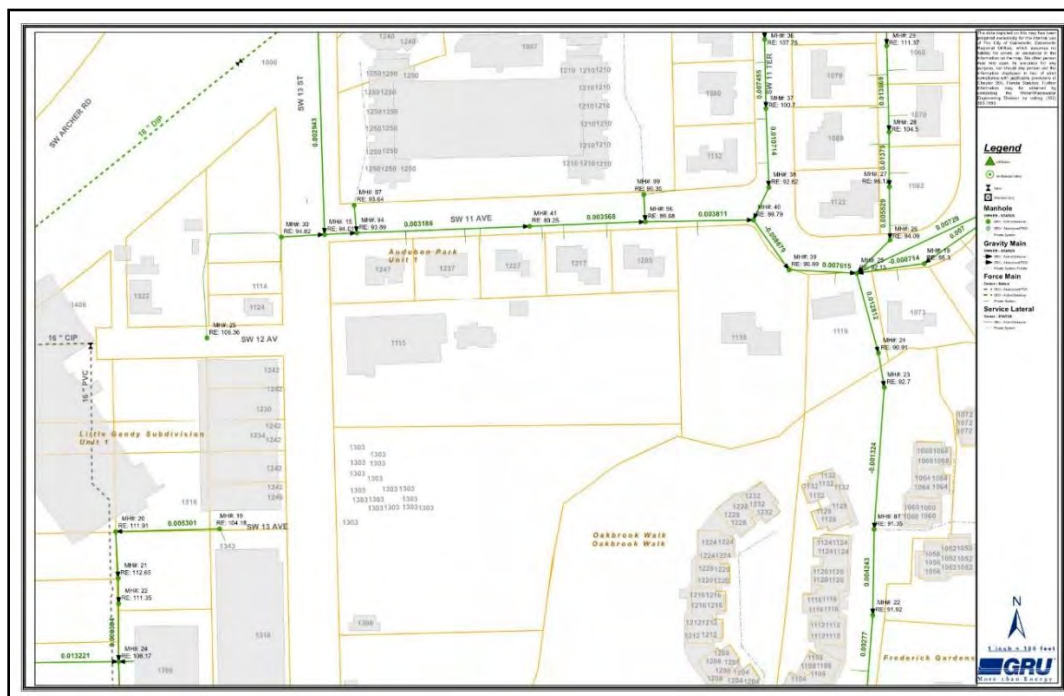

Figure 9. Existing Sanitary Sewer Infrastructure

Table 4: Projected Sanitary Sewer Demand

Land Use	Maximum Units	Generation Rate ¹	Estimated Demand (GPD)
Proposed			
Apartment (ITE 220)	148	106 gal/person/day (2.2 persons per household)	34,514
Existing			
Single-Family Detached Housing (ITE 220)	-5	106 gal/person/day (2.2 persons per household)	-530
Net Demand	-	-	33,984

1. Source: City of Gainesville Comprehensive Plan, Potable Water & Wastewater Element

Conclusion: As shown in Figure 9, the project site will be served by existing Gainesville Regional Utilities sanitary sewer infrastructure. If the project were to be developed utilizing the site's maximum development potential, this Ss-CPA and concurrent Rezoning application's approval would result in a potential increase of **33,984 gallons per day** in estimated onsite sanitary sewer demand and *would not* negatively impact the adopted Level of Service (LOS).

Potential Solid Waste Impact

Table 5. Projected Solid Waste Demand and Capacity

Land Use	Maximum Units	Generation Rate	Tons Per Year
Proposed			
Apartment (ITE 220)	148	.655 tons/person/day ¹ (2.2 persons per household)	213
Existing			
Single-Family Detached Housing (ITE 220)	-5	.665 tons/person/day ¹ (2.2 persons per household)	-7
Leveda Brown Environmental Park			>20 years

1. Source: City of Gainesville Comprehensive Plan, Solid Waste Element

2. Source: Alachua County Comprehensive Plan, Solid Waste Element

Conclusion: As calculated in Table 5, solid waste facility capacity exists to adequately serve the proposed Ss-CPA and concurrent Rezoning application's approval. If the project were to be developed utilizing the site's maximum development potential, these application's approval *would not* negatively impact the adopted LOS. The Leveda Brown Environmental Park and Transfer Station has the capacity to process various components of the solid waste stream for the next 20 years. This facility has adequate capacity to meet the proposed amendment's demand.

Public School and Recreation Impact

The City of Gainesville requires all Ss-CPA applications involving residential developments to include an estimated Public School Generation analysis. This is conducted by completing the City's Public School Student Generation Calculation Form. A completed copy of this form has been included within this application's submittal. The development's estimated impact on the City's Public School System is found in the table below:

Table 6: Projected Public School Demand

Land Use ¹	Units	Elem.		Middle		High	
(ITE)		Rate ²	Total	Rate ²	Total	Rate ²	Total
Proposed							
Apartment (ITE 220)	148	.08	12	.03	4	.03	4
Existing							
Single-Family Detached Housing (ITE 220)	-5	.15	-1	.07	-1	.09	-1
Net Generation	-	-	11	-	3	-	3

1. Source: ITE Trip Generation Manual, 9th Edition

2. Source: City of Gainesville School Concurrency Form

If the project were to be developed utilizing the site's maximum development potential, these applications' approval would result in a potential increase of **11** elementary and **3** middle and high school **student stations** to the City's Public School system.

As evidenced by the LOS Standards for Parks' table within the City of Gainesville Comprehensive Plan's Recreation Element, the City's existing LOS for City Parks exceed the Adopted LOS for all Gainesville park designations. This discrepancy is shown on Table 7 of this report:

Table 7: LOS Standards for Parks

Park	Adopted LOS Standard	Existing LOS
Local Nature/Conservation	6.00 ac.	15.71 ac.
Community Park	2.00 ac.	2.13 ac.
Neighborhood Park	.80 ac.	1.33 ac.
Total Acres per 1000	8.80 ac.	19.73 ac.

1. Source: Alachua County Comprehensive Plan, Recreation Element

If the creation of recreation facilities is deemed appropriate for the project site as a result of this application, the developer will remain consistent with all Recreation design policies required by the City's Comprehensive Plan and LDC.

4. CONSISTENCY WITH CITY OF GAINESVILLE COMPREHENSIVE PLAN

The proposed Ss-CPA site is currently designated as SF on the City's adopted Future Land Use Map (FLUM). The requested FLU classification change to UMUH is consistent with the accompanying rezoning request for the U9 zoning district.

The UMUH designations permit a mixture of residential and nonresidential uses designed to promote both pedestrian and transit use in the City of Gainesville's developed, urban area. The proposed amendment is consistent with the following Comprehensive Plan goals, objectives, and policies:

FUTURE LAND USE ELEMENT

- GOAL 1** IMPROVE THE QUALITY OF LIFE AND ACHIEVE A SUPERIOR, SUSTAINABLE DEVELOPMENT PATTERN IN THE CITY BY CREATING AND MAINTAINING CHOICES IN HOUSING, OFFICES, RETAIL, AND WORKPLACES, AND ENSURING THAT A PERCENTAGE OF LAND USES ARE MIXED, AND WITHIN WALKING DISTANCE OF IMPORTANT DESTINATIONS.
- Policy 1.1.1** To the extent possible, all planning shall be in the form of complete and integrated communities containing housing, shops, workplaces, schools, parks and civic facilities essential to the daily life of the residents.
- Policy 1.1.2** To the extent possible, neighborhoods should be sized so that housing, jobs, daily needs and other activities are within easy walking distance of each other.
- Objective 1.2** Protect and promote viable transportation choices (including transit, walking and bicycling, and calmed car traffic).
- Policy 1.2.3** The City should encourage mixed-use development, where appropriate.
- Objective 1.4** Adopt land development regulations that promote mixed-use development.
- Objective 1.5** Discourage the proliferation of urban sprawl.
- Policy 4.1.3** The City will review proposed changes to the Future Land Use Map by considering factors such as, but not limited to, the following:
- Support for urban infill and/or redevelopment.

*TRANSPORTATION MOBILITY ELEMENT**Transportation Mobility Element Overall Goal*

ESTABLISH A TRANSPORTATION SYSTEM THAT ENHANCES COMPACT DEVELOPMENT, REDEVELOPMENT, AND QUALITY OF LIFE, THAT IS SENSITIVE TO CULTURAL AND ENVIRONMENTAL AMENITIES, AND THAT IMPLEMENTS THE VISION OF THE "YEAR 2035 LONG RANGE TRANSPORTATION PLAN" WITHIN THE CITY OF GAINESVILLE. THE TRANSPORTATION SYSTEM SHALL BE DESIGNED TO MEET THE NEEDS OF PEDESTRIANS, BICYCLISTS, TRANSIT, AND AUTO USERS. SAFETY AND EFFICIENCY SHALL BE ENHANCED BY LIMITATIONS AND CARE IN THE LOCATIONS OF DRIVEWAYS, PROVISION OF SIDEWALK CONNECTIONS WITHIN DEVELOPMENTS, AND AN OVERALL EFFORT TO ENHANCE AND ENCOURAGE PEDESTRIAN MOBILITY THROUGHOUT THE COMMUNITY BY IMPROVEMENT AND PROVISION OF SAFE CROSSINGS, COMPLETE SIDEWALK AND TRAIL SYSTEMS, AND SIDEWALKS OF ADEQUATE WIDTHS. BASIC TRANSPORTATION SHOULD BE PROVIDED FOR TRANSPORTATIONDISADVANTAGED RESIDENTS TO EMPLOYMENT, EDUCATIONAL FACILITIES, AND BASIC SERVICES.

- Objective 2.1 Create an environment that promotes transportation choices, compact development, and a livable city.
- Objective 2.2 Ensure that Future Land Use Map designations promote transportation objectives by designating transit-supportive densities in appropriate locations to support transportation choice.
- Objective 3.1 Establish land use designations and encourage development plans that reduce vehicle miles traveled and are transit supportive.
- Objective 7.1 Provide multi-modal opportunities and mixed-use development areas to reduce single-occupant automobile trips and reduce vehicle miles traveled.

5. URBAN SPRAWL ANALYSIS

The approval of this Ss-CPA does not constitute urban sprawl. As defined in Florida Statutes, 'Urban Sprawl' means "a development pattern characterized by low density, automobile-dependent development with either a single use or multiple uses that are not functionally related, requiring the extension of public facilities and services in an inefficient manner, and failing to provide a clear separation between urban and rural uses" (§ 163.3164(51)).

The thirteen (13) indicators of urban sprawl identified in Chapter 163.3177(6)(a)9.a, Florida Statutes states:

"The evaluation of the presence of these indicators shall consist of an analysis of the plan or plan amendment within the context of features and characteristics unique to each locality..."

As demonstrated by the following analysis, the proposed Ss-CPA does not trigger any urban sprawl indicators, and adoption of this Ss-CPA will discourage the proliferation of urban sprawl within the City of Gainesville and Alachua County.

1. Promotes, allows or designates for substantial areas of the jurisdiction to develop as low-intensity, low-density, or single-use development or uses in excess of demonstrated need.

Response: The proposed Ss-CPA will amend the current single-use residential SF FLU designation to UMUH which is intended to allow a mix of residential and non-residential uses. The project site is located within the developed, urban area of the City. The proposed Ss-CPA will encourage urban infill on the currently underdeveloped site. The proposed UMUH FLU designation is also consistent with the existing mixed-use FLU pattern along US-441.

2. Promotes, allows, or designates significant amounts of urban development to occur in rural areas at substantial distances from existing urban areas while leaping over undeveloped lands which are available and suitable for development.

Response: The project site is located within the developed, urban area of the City. The proposed Ss-CPA will encourage urban infill development on the currently underutilized site. The proposed UMUH FLU designation is also consistent with the existing mixed-use FLU pattern found along US-441—a major arterial roadway. The potential urban infill development on the project site will help to reduce development pressures in the urban fringe areas and in rural areas.

3. Promotes, allows, or designates urban development in radial, strip, isolated, or ribbon patterns generally emanating from existing urban developments.

Response: The proposed UMUH FLU designation and the corresponding U9 zoning district possess development standards that prohibit strip development. These U9 district possesses development standards that promote a pedestrian friendly, mixed-use development pattern.

4. As a result of premature or poorly planned conversion of rural land to other uses, fails adequately to protect and conserve natural resources, such as wetlands, floodplains, native vegetation, environmentally sensitive areas, natural groundwater aquifer recharge areas, lakes, rivers, shorelines, beaches, bays, estuarine systems, and other significant natural systems.

Response: The project site is located within the developed, urban area of the City. The proposed Ss-CPA will encourage urban infill development on the currently underutilized site. The proposed UMUH FLU designation is also consistent with the existing mixed-use development pattern along a major arterial roadway. The potential urban infill redevelopment on the project site will help to reduce development pressures in the urban fringe areas and in rural areas.

5. Fails adequately to protect adjacent agricultural areas and activities, including silviculture, and including active agricultural and silvicultural activities as well as passive agricultural activities and dormant, unique and prime farmlands and soils.

Response: Due to the site's urban setting, no agricultural activities are adjacent to the site, nor will any be interrupted or discontinued.

6. Fails to maximize use of existing public facilities and services.

Response: The site utilizes existing public facilities and services will be supplied by Gainesville Regional Utilities (GRU) and the City of Gainesville Public Works Department, in the form of roads, sidewalks, and other services.

7. Fails to maximize use of future public facilities and services.

Response: The site will utilize the City's existing and future public facilities and services.

8. Allows for land use patterns or timing which disproportionately increase the cost in time, money and energy, of providing and maintaining facilities and services, including roads, potable water, sanitary sewer, stormwater management, law enforcement, education, health care, fire and emergency response, and general government.

Response: The site is located in an urban area that is already supported by public facilities and services. Therefore, the urban infill redevelopment attributable to this Ss-CPA does not disproportionately increase the cost in time, money, or energy by providing and maintaining these facilities and services.

9. Fails to provide a clear separation between rural and urban uses.

Response: Located in the City of Gainesville's developed, urban area, this site further defines urban space, as well as relieves development pressure at the urban fringe and in rural areas.

10. Discourages or inhibits infill development or the redevelopment of existing neighborhoods and communities.

Response: The proposed Ss-CPA encourages urban infill by increasing the potential for redevelopment on a currently underutilized lot in an area with an existing mixed-use and multifamily development pattern along a major arterial roadway.

11. Fails to encourage an attractive and functional mix of uses.

Response: The proposed Ss-CPA will amend the current single-use, residential SF FLU designation to UMUH which is intended to allow a mix of residential and non-residential uses. The project site is located within the developed, urban area of the City. The proposed Ss-CPA will encourage urban infill development of the currently underutilized site. The proposed UMUH FLU designation is also consistent with the existing mixed-use development pattern found along the adjacent major arterial roadway.

12. Results in poor accessibility among linked or related land uses.

Response: The proposed Ss-CPA and subsequent onsite redevelopment has the potential to increase connectivity between the mix of uses located along the east side of SW 13th Street between SW 9th Road and SW 16th Ave. The area's urban character provides multi-modal connectivity between the project site and nearby existing institutional, multifamily, and non-residential uses.

13. Results in the loss of significant amounts of functional open space.

Response: The project site does not contain any functional open space. The existing residential lots are privately owned and not available to the general public.

In addition to the thirteen (13) indicators of urban sprawl, Florida Statutes section 163.3177(6)(a)9.b identifies eight (8) development pattern or urban form criteria. If four (4) or more of those criteria are met, the presumption is that the amendment discourages urban sprawl. The proposed amendment and corresponding development are found to meet the following four (4) criteria as identified in §163.3177(6)(a)9.b.(I), (II), (III), and (VII).

1. Sec. (163.3177(6)(a)9.b(I)): Directs or locates economic growth and associated land development to geographic areas of the community in a manner that does not have an adverse impact on and protects natural resources and ecosystems.

Response: The project site is located within the developed, urban area of the City. The proposed Ss-CPA will encourage urban infill redevelopment of the currently underutilized site. The proposed UMUH FLU designation is also consistent with the existing mixed-use FLU pattern found along US-441—a major arterial roadway. The potential urban infill development on the project site will help to reduce development pressures in the urban fringe areas and rural areas where natural resources and ecosystems can be further protected and enhanced.

2. Sec. (163.3177(6)(a)9.b(II)): Promotes the efficient and cost-effective provision or extension of public infrastructure and services.

Response: The site utilizes existing public facilities and services supplied by Gainesville Regional Utilities (GRU) and the City of Gainesville Public Works

Department. Any urban infill redevelopment on the project site will retain the use of GRU and City infrastructure and services, including centralized potable water and sanitary sewer. The site's immediate adjacency to nearby residential and nonresidential areas encourages alternative transportation modes in the area.

3. Sec. (163.3177(6)(a)9.b(III)): Promotes walkable and connected communities and provides for compact development and a mix of uses at densities and intensities that will support a range of housing choices and a multimodal transportation system, including pedestrian, bicycle, and transit, if available.

Response: The site is located within the City of Gainesville's developed, urban area and proximate to an existing mixed-use development pattern. The mixed-use character of this Gainesville area allows tenants to work in close proximity to where they live.

4. Sec. (163.3177(6)(a)9.b(VII)): Creates a balance of uses based upon demands of the residential population for the nonresidential needs of an area.

Response: This Ss-CPA is intended to permit additional multifamily units for Phase II of The Nine's two-phase development. This urbanized area of Gainesville possesses numerous commercial uses within walking distance of the subject property—retaining this corridor's healthy balance of residential and nonresidential uses.

MEMORANDUM

2 October 2017

To: Brad Wolfe, Director of Development
908 Group

From: Pete Wallace 

Subject: The Nine at Gainesville, Phase II

Introduction

Ecosystem Research Corporation (ERC) was retained by the **908 Group** to perform a general Environmental Resource Assessment (ERA) at The Nine at Gainesville (The Nine), which is currently under construction. The Nine consists of two phases, Phase I and Phase II, located within the southeast quadrant of the intersection of SW 13th Street (US 441) and SW 11th Avenue (**Figure 1**). Phase I is currently under construction and consists of **3.63** acres. Phase II is proposed for future construction and consists of **1.56** acres. Phase I was historically located on five (5) Alachua County tax parcels (15615-000-000, 15600-033-000, 15600-031-000, 15600-032-000, and 15600-030-000), and Phase II is proposed for Alachua County tax parcels 15600-029-000 and 15601-034-000 (**Figure 2**). The current ERA describes the existing Environmental Resources of the Phase II Project Site and is prepared in support of a Small-Scale Comprehensive Plan Amendment and Zoning Change Application currently being submitted for the Phase II Project Site.

General Environmental Setting

The Project Site is located geographically within the southwest area of the City of Gainesville along the southeast perimeter of the University of Florida. The site is located within the geographic coverage area of the Gainesville East USGS quadrangle map (**Figure 3**). The quad map clearly shows that the site lies along the north boundary of Tumblin Creek, which is a regulated creek as described within the City of Gainesville Land Development Regulations (**Figure 4**).

The LiDAR topography (2001, NAVD88) of the Project Site and surrounding area is shown on **Figure 5** and a close-up of the LiDAR coverage of the Project Site is shown on **Figure 6**. The LiDAR coverage clearly shows the location of the excavated creek channel with steep slopes that define a deeply incised channel. Tumblin Creek, which historically

originated north of University Avenue adjacent to NW 6th Street, has been totally filled for much of the extent from the historical headwaters to SW 5th Avenue. From this area to the terminus at Bivens Arm, the creek was excavated several times from the 1940s to the 1970s. There are **NO** areas of the historical channel remaining in the natural historical condition. The creek has been excavated and filled with dirt, debris, concrete, and various other building type construction debris along its entire length. The creek now functions as a significantly disturbed stormwater conveyance that routes water through southwest Gainesville.

The topography from the LiDAR shows the Phase II area gently slopes upland from the creek from an approximate top-of-bank contour of ± 87 ft (surface water boundary) (**Figure 7**) to a high elevation of ± 92 ft. The bottom contour of the creek bed is represented by the 79-ft contour in the Phase II Project Site area. There is an old remnant channel of the creek that runs along the south boundary of the Project Site between the 86-ft and 88-ft contours (Figure 7). This old creek area was used as part of an irrigation area for previous landowners that occupied the onsite dwellings in the late 1940s and 1950. There are currently headwall structures and small check dams present in the old creek that may have been used for onsite irrigation or water retention. This area of the site flooded for a short period during Hurricane Irma but the existing vegetation would not be consistent with describing this feature as a wetland area. However, within the remnant channel there are silt soils and scattered gleyed clays that support the historical origins of the area. There is an old water pump still located in the existing creek channel in the south-central area of the southern site perimeter. The well or pump has an elaborate concrete structure within the existing creek bed that appears to have been associated with a dam that caused water to pool on the upstream side. This dam was probably used in association with the pump to route creek water north to the Project Site. There is a 3–4-inch metal irrigation pipe that is still visible that travels from the pump to somewhere on site. The pipe is visible within the historical extent of the old stream channel.

Also evident on the 2001 LiDAR topography is an old road crossing that extends across the creek that was located off site at the southeast corner of the site. There are remnant culverts at this location, but the road crossing is no longer visible on the ground. There is a constriction in the creek channel at this location, but the roadway was apparently washed away.

The FEMA flood prone map for the site and surrounding area is shown on **Figure 8**. In the area of the Project Site, the FEMA flood zone is mapped as Zone AE in which the base flood elevations of Tumblin Creek have been calculated by the City of Gainesville. The actual flood zone for the area will be regulated by the actual flood contour that will be more rigorously defined on the site topographic survey. The actual flood zone as redefined by the City of Gainesville is most probably substantially less than the area defined by the FEMA flood zone as shown on Figure 8.

The Natural Resources Conservation Service (NRCS) soils mapping units found on the Project Site are shown on **Figure 9**. There are two (2) primary mapping units shown and described as Arredondo fine sand, 5 to 8 percent slopes and Lochloosa fine same, 2 to 5 percent slopes. Despite the generally described physical characteristics of these mapping units as defined by NRCS, all onsite soils have been dredged and filled and drained and so significantly altered that the general drainage characteristics that exist today would need to be verified by site-specific geotechnical investigation.

General Results of Field Survey

A field survey was conducted of the Project Site on 29 September 2017 to generally assess the plant communities and habitats present on the Phase II area. The results of the field survey are shown on **Figure 10**, in which the GPS icons represent areas where site-specific data were recorded. Both parcels within the Phase II area are currently occupied by residential areas with usable dwellings. The dwelling located on parcel 15600-029-000 is abandoned while the dwelling on parcel 15601-034-000 is occupied. Both residential areas have significant cover of exotic yard grasses and exotic ornamental species. Tree canopy areas are dominated by live oak (*Quercus virginiana* Mill.), laurel oak (*Quercus hemisphaerica* Bartr.), water oak (*Quercus nigra* L.), sweetgum (*Liquidambar styraciflua* L.), pignut hickory (*Carya glabra* [Mill.] Sweet), and southern magnolia (*Magnolia grandiflora* L.) with many camphor-tree (*Cinnamomum camphora* [L.] Nees & Eberm.) also present. A complete listing of the most common species encountered is shown in **Table 1**. The north boundary of the creek channel has a variable width buffer of large native and exotic tree species. The historical and existing locations and characteristics of the onsite creek channel will be more accurately evaluated when the site topographic survey is complete. There is an erosional area associated with the construction of Phase I in the southeast corner of that project site area. This area will need to be regraded and planted to avoid significant further erosion and instability of the creek bank. Many of the large trees that occur within the creek buffer are nearly at the end of their life expectancy. Many trees have roots exposed within the creek channel and are susceptible to continued erosion and future storm damage.

There were **NO** listed plant or animal species found on the Project Site. A search of the available GIS databases for listed species was performed and the results are presented on **Figure 11**. Based on the results of the data search, there are **NO** eagle nests or wading bird rookeries in the immediate vicinity of the Project Site. The site is located within the historical forage buffer of the River Styx Wood Stork Colony; however, this colony is currently considered to be abandoned. The site is located within an historical red-cockaded woodpecker consultation area but this species is considered extirpated from Alachua County. The site is located within an Eastern Indigo Snake occurrence area but onsite habitat for this species is considered as minimal. Development of the Phase II area will have a very minimal chance to adversely affect transient use of the site by listed animal species.

Final Statement

Based on the results of the field survey and GIS related information, there are **NO** onsite Regulated Natural Resources that would prevent or significantly interfere with development of the Project Site as proposed. The creek buffer that will be required will be more discretely defined when the site topographic survey is complete. If you need any additional information, please do not hesitate to give me a call.

Staff Administrative Review

A determination that there is adequate school capacity for a specific project will satisfy requirements for review for school concurrency for the periods of time consistent with the Interlocal Agreement and specified in local government land development regulations; an agreement by the School Board with the developer and local government is required to extend the period for approvals for phased projects beyond the generally applicable time period

EXPLANATION OF STUDENT GENERATION CALCULATION

Student Generation is calculated based on the type of residential development and the type of schools. The number of student stations (by school type - Elementary, Middle and High School) used for calculating the school concurrency impacts is equal to the number of dwelling units by housing type multiplied by the student generation multiplier (for housing type & school type) established by the School Board. Calculations are rounded to the nearest whole number. Student Generation for each school type is calculated individually to assess the impact on the **School Concurrency Service Area (SCSA)** for each school type (Elementary, Middle and High School).

SCHOOL CONCURRENCY SERVICE AREAS (SCSA) FOR PROJECT LOCATION

Based on the project location, please identify the corresponding School Concurrency Service Areas for each school type. Maps of the SCSAs can be obtained from Alachua County Growth Management Department GIS Services by clicking on the "GIS Data" link.

EXEMPT DEVELOPMENTS (click all that apply)

Existing legal lots eligible for a building permit

Development that includes residential uses that has received final development plan approval prior to the effective date for public school concurrency, or has received development plan approval prior to June 24, 2008, provided the development approval has not expired

Amendments to final development orders for residential development approved prior to the effective date for public school concurrency, and which do not increase the number of students generated by the development

Age-restricted developments that prohibit permanent occupancy by persons of school age, provided this condition is satisfied in accordance with the standards of the Public School Facilities Element or the ILA

Group quarters that do not generate public school students, as described in the ILA

RE: The Nine Phase II – Level of Service Addendum

The following tables summarize the potential net impacts from the proposed rezoning. The current RSF-1 zoning district allows a maximum of 3.5 residential units per acre while the proposed U9 district allows for 100. The original Level of Service (LOS) analysis assumed a multi-family development with a maximum of 148 units for the ±1.48-acre site. However, City of Gainesville staff has since requested that the applicant also evaluate the inclusion of non-residential uses. Therefore, this revised analysis includes two development scenarios: the intended multi-family apartment complex and a multi-family apartment complex plus 5,000 sq. ft. of permitted, non-residential uses.

The potential net impacts from either of these rezoning scenarios are not anticipated to cause public facilities to operate below the City's adopted LOS standards. LOS standards were calculated based on the net density increases that may result from either development scenario.

Table 1: Potential Net Trip Generation (Multi-Family Development)

Category ¹	Units	AADT		A.M. Peak Hour		P.M. Peak Hour	
		Rate	Trips	Rate	Trips	Rate	Trips
Existing							
Single-Family Residential (ITE 210)	5	9.52	48	0.75	4	1.00	5
Proposed							
Apartment (ITE 220)	518 Persons ²	3.31	1,715	0.28	145	0.40	207
Total Net Trips		-	1,667	-	141	-	202

1. Source: ITE Trip Generation Manual, 9th Edition

2. Note: As discussed with City staff, an average of 3.5 bedrooms per unit is utilized for the trip generation estimates

Table 2: Potential Net Trip Generation (Multi-Family + Non-Residential Development)

Category ¹	Units	AADT		A.M. Peak Hour		P.M. Peak Hour	
		Rate	Trips	Rate	Trips	Rate	Trips
Existing							
Single-Family Residential (ITE 210)	5	9.52	48	0.75	4	1.00	5
Proposed							
Apartment (ITE 220)	518 Persons ²	3.31	1,715	0.28	145	0.40	207
Specialty Retail (ITE 826)	5,000 sq. ft.	44.32	222	6.84	34	2.71	14
Total Net Trips		-	1,889	-	175	-	216

1. Source: ITE Trip Generation Manual, 9th Edition

2. Note: As discussed with City staff, an average of 3.5 bedrooms per unit is utilized for the trip generation estimates

Conclusion: The potential net impacts from either development scenario will not negatively impact the City's adopted LOS. The site is located within the City's Transportation Mobility Program Area (TMPA) Zone A. Developments within TMPA Zone A are responsible for providing transportation improvements that are required due to safety and/or operational conditions. Development within TMPA Zone A will be required to provide items a. – e. identified in the City's Comprehensive Plan, Transportation Mobility Element Policy 10.1.4.

- a. Sidewalk connections to existing and planned public sidewalk;
- b. Cross-access connections/easements or joint driveways;
- c. Deeding of land or conveyance of required easements along the property frontage to the City, as needed, for the construction of public sidewalks, bus turn-out facilities and/or bus shelters;
- d. Closure of existing excessive, duplicative, or unsafe curb cuts or narrowing of overly wide curb cuts at the development site; and
- e. Provide safe and convenient on-site pedestrian circulation.

The proposed redevelopment allows residents and employees to have walking access to the Regional Transit System's (RTS) numerous bus routes. Urban infill along existing bus routes is consistent with the City's and RTS's long term transportation plans and policies.

Table 3: Potential Net Potable Water Impact (Multi-Family Development)

Use	Units	Rate	Gallons Per Day
Existing			
Single-Family Residential	5	200 gal/person/day ¹ (2.2 persons per household)	2,200
Proposed			
Multi-Family Residential	148	200 gal/person/day ¹ (2.2 persons per household)	65,120
Total Net Impact			62,920

Use	Units	Rate	Gallons Per Day
Existing			
Single-Family Residential	5	200 gal/person/day ¹ (2.2 persons per household)	2,200
Proposed			
Multi-Family Residential	148	200 gal/person/day ¹ (2.2 persons per household)	65,120
Commercial / Retail	5,000 sq. ft.	0.15 gal/sq. ft. ²	750
Total Net Impact			63,670

1. Source: City of Gainesville Comprehensive Plan, Potable Water & Wastewater Element

2. Source: Ch. 64E-6.008, F.A.C.

Conclusion: As shown in Figure 1, the project site will be served by existing Gainesville Regional Utilities potable water infrastructure. The potential net impacts from either development scenario will not negatively impact the City's adopted LOS for potable water.

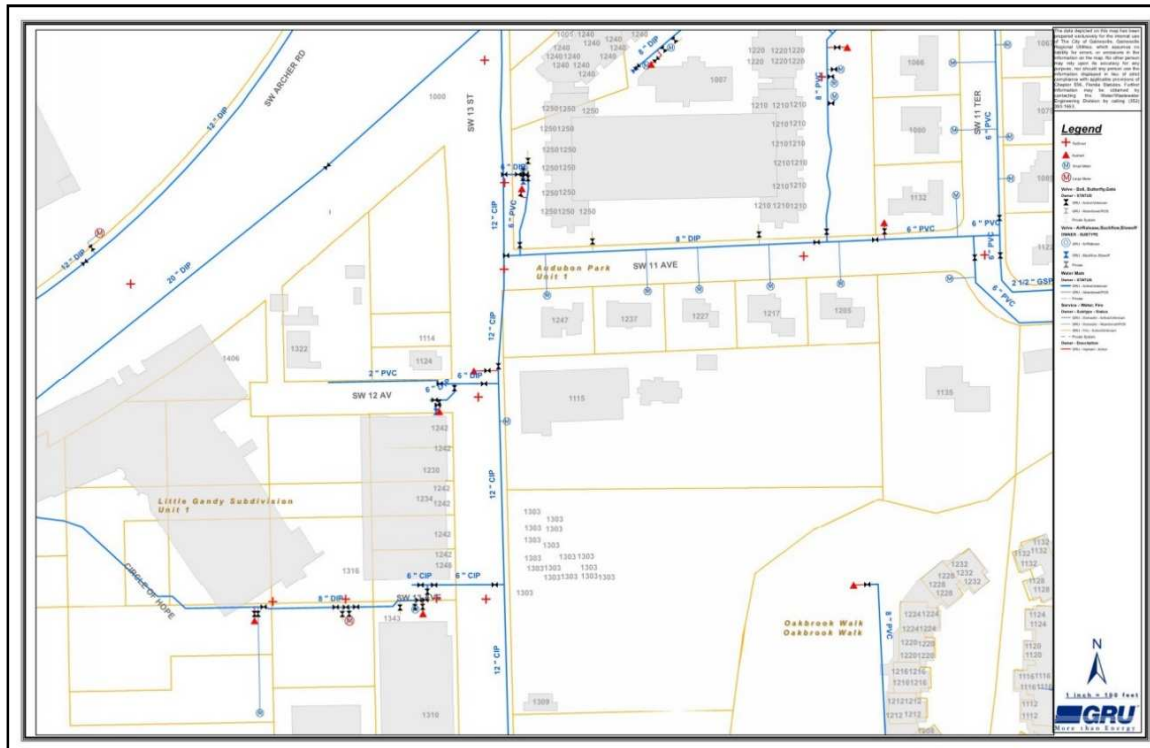

Figure 1: GRU Potable Water Infrastructure

Table 5: Potential Net Wastewater Impact (Multi-Family Development)

Use	Units	Rate	Gallons Per Day
Existing			
Single-Family Residential	5	147 gal/person/day ¹ (2.2 persons per household)	1,617
Proposed			
Multi-Family Residential	148	147 gal/person/day ¹ (2.2 persons per household)	47,863
Total Net Impact			46,246

2. Source: City of Gainesville Comprehensive Plan, Solid Waste Element

Table 8: Potential Solid Waste Impact (Multi-Family + Non-Residential Development)

Use	Units	Rate	Tons Per Year
Existing			
Single-Family Residential	5	0.655 tons/person/year ¹ (2.2 persons per household)	7.20
Proposed			
Multi-Family Residential	148	0.655 tons/person/year ¹ (2.2 persons per household)	213.27
Commercial / Retail	5,000 sq. ft.	((12 lbs. / 1000 sq. ft. per day x 5,000 s.f.) x 365)/2,000 ²	10.95
Alachua County Solid Waste Facility Capacity²			>10 years

1. Source: Sincero and Sincero: *Environmental Engineering: A Design Approach*, Prentice Hall, NJ, 1996

2. Source: City of Gainesville Comprehensive Plan, Solid Waste Element

Conclusion: As calculated in *Tables 7 and 8*, solid waste facility capacity exists to adequately serve either development scenario for the subject property. Thus, approval of this rezoning application will not negatively impact the City's adopted LOS.

Potential Net Public School Student Generation

Conclusion: A School Concurrency form was submitted as part of the original application package, which is reiterated in Table 9. There is no change in the total number of multi-family units between each scenario. School concurrency will again be calculated at the time of development plan approval.

Table 9: Projected Public School Demand

Land Use	Units	Elem.		Middle		High	
		Rate²	Total	Rate²	Total	Rate²	Total
Existing							
Single-Family Residential	5	.15	1	.07	1	.09	1
Proposed							
Multi-Family Residential	148	.08	12	.03	4	.03	4
Net Generation	-	-	11	-	3	-	3

1. Source: City of Gainesville School Concurrency Form

Potential Net Recreation Impact

There is no change in the total number of multi-family units between each scenario. Therefore, the Recreation demand has not been amended. Table 10 shows that the City's existing LOS for City Parks exceed the Adopted LOS for all Gainesville park designations.

Table 10: LOS Standards for Parks

Park	Adopted LOS Standard	Existing LOS
Local Nature/Conservation	6.00 ac.	15.71 ac.
Community Park	2.00 ac.	2.13 ac.
Neighborhood Park	0.80 ac.	1.33 ac.
Total Acres per 1000	8.80 ac.	19.73 ac.
