HISTORIC PRESERVATION BOARD STAFF REPORT

PUBLIC HEARING DATE:

June 2, 2020

ITEM NO:

#2 under New Business

PROJECT NAME AND NUMBER:

HP-20-00035, 214 NE 5th Avenue

APPLICATION TYPE:

Quasi-Judicial: Installation of roof mounted photovoltaic solar system

RECOMMENDATION:

Staff recommends the board hear the request for the solar array as proposed in the application.

CITY PROJECT CONTACT:

Jason Simmons

Figure 1: Location Map

APPLICATION INFORMATION:

Agent/Applicant: ESD Solar, Inc.
Property Owner(s): Brandon Peterson

SITE INFORMATION:

Address: 214 NE 5th Avenue
Parcel Number(s): 14104-000-000
Existing Use(s): Single-Family Residential
Zoning Designation(s): Urban 2
Historic District: Northeast Residential
Historic District Status: Contributing
Date of construction: c. 1930 ACPA & c. 1922 AL007290

PURPOSE AND DESCRIPTION:

Nolan Beall, ESD Solar, agent for Brandon Peterson. Certificate of Appropriateness to install a roof mounted photovoltaic solar system on a single-family house. Located at 214 NE 5th Avenue. This building is a contributing structure to the Northeast Residential Historic District.

STAFF REVIEW AND RECOMMENDATION:

EXISTING

The contributing building was built in 1922 according to the Florida Master Site File. The property is zoned Urban 2 and is approximately 0.25 acres in size. The house is approximately 2,047 square feet in size. The property is a corner lot with right-of-way frontage on NW 5th Avenue and NW 3rd Street. The existing house is a one and one half story, weatherboard covered bungalow style house that represents a typical Gainesville dwelling of the 1920's. It appears on the Sanborn map of 1922. The house has a wood frame structural system, a brick chimney, a brick wall foundation, brick porch columns with brackets, and a gable roof with a shed dormer on the secondary roof structure.

PROPOSED

The applicant is requesting approval of a 15kW solar photovoltaic system on the roof, with 47 Axitec AC-320MH/120S residential modules and 47 Enphase IQ7-60-2-US microinverters, placed on all sides of the roof surface of the principal structure. The modules are the flush mount type to

be installed in the same plane as the roof. This petition is related to a building permit in review for the project, BP-20-00827.

REVIEW

Roofs are a highly visible component of historic buildings and are an integral part of a building's overall design and architectural style. A rooftop solar photovoltaic power system is a system that uses one or more photovoltaic panels installed on the surface of a roof, either parallel to a sloped roof/surface or rack-mounted on a flat roof, to convert sunlight into electricity and is ten kw or less for residential structures and 300 kw or less for nonresidential structures. The subject power system has been placed on the principal structure on the property which is a single-family dwelling. The building is considered a contributing structure in the Northeast Residential Historic District.

The system is located on a primary roof facade elevation and is in fact located on all sides of the structure. The installation will not result in the permanent loss of significant character-defining features of a historic resource, such as existing roof lines or dormers; the installation is reversible; the system is flush to the roof or low profile, to the extent feasible; and the system blends into the surrounding features of the historic resource to the extent possible.

Basis for Approval – Secretary of the Interior's Standards for Rehabilitation

Consideration of a Certificate of Appropriateness application is pursuant to Section 30-3.5 of the Land Development Code and the Secretary of Interior's Standards for Rehabilitation which serves as the basis for the City of Gainesville's Historic Preservation Rehabilitation and Design Guidelines. The Historic Preservation Board shall adhere to the preservation principles of maintaining historic fabric and compatibility with surrounding properties.

The ***Historic Preservation Rehabilitation and Design Guidelines***, based on the Secretary of Interior Standards for Rehabilitation, which has become the authoritative guidelines for rehabilitation, list the following:

Within the City of Gainesville Land Development Code, Section 30-4.28.E.4., indicates the staff approval guidelines for the review of rooftop solar photovoltaic systems. Those criteria are listed below:

4. ***Staff approval.*** The City Manager or designee may issue a certificate of appropriateness if the work will either result in the original appearance of the structure, as defined in this chapter, or will meet the city's Historic Preservation Rehabilitation and Design Guidelines on file with the city. The City Manager or designee shall refer the application to the Historic Preservation Board if the work cannot be approved pursuant to this subsection.
 - a. ***Rooftop solar photovoltaic power systems.*** For the installation of a rooftop solar photovoltaic power system, as defined in this chapter, the City Manager or designee

may issue a certificate of appropriateness if the system: 1) will not be seen from any street frontage, 2) will meet the city's Historic Preservation Rehabilitation and Design Guidelines, and 3) will meet the following additional design criteria as applicable:

- i. The system will be installed on a non-contributing accessory structure, such as a shed or garage, to a contributing or individually listed structure, or on a non-historic portion of a contributing or individually listed structure;
- ii. The system will be located in a manner such that it does not affect the primary roof facade elevations;
- iii. Installation will not result in the permanent loss of significant character-defining features of a historic resource, such as existing roof lines or dormers;
- iv. Installation will not result in the removal or permanent alteration of historic fabric and is reversible;
- v. The system will be flush to the roof or low profile, to the extent feasible;
- vi. On flat roofs, the system will be set back from the edge. If there is a parapet, the system will be located behind the parapet walls; and
- vii. The system will blend into the surrounding features of the historic resource.

The reason this petition is before the Historic Preservation Board for review is that the photovoltaic solar system is located on a contributing principal structure and the system is visible from the right-of-way on the primary roof facade elevation as well as the other roof facade elevations. However, the installation will not result in the permanent loss of significant character-defining features of a historic resource, such as existing roof lines or dormers; the installation is reversible in that the solar panels can be removed in the future without permanent alteration of the historic fabric of the house; and the panels are the flush mount, low profile type.

The proposed solar panel installation does conform to the Secretary of the Interior's Standards for Rehabilitation, particularly Standard 2:

2. The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.

and Standard 9:

9. New additions, exterior alterations or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale and architectural features to protect the historic integrity of the property and its environment.

RECOMMENDATION

Staff recommends the board hear the request for the solar array as proposed in the application.

Exhibit 1 Historic Preservation Rehabilitation and Design Guidelines

THE **HISTORIC PRESERVATION REHABILITATION AND DESIGN GUIDELINES**, BASED ON THE SECRETARY OF INTERIOR STANDARDS FOR REHABILITATION, WHICH HAS BECOME THE AUTHORITATIVE GUIDELINES FOR REHABILITATION STATE:

Roof and Roof Structures

Applicable Secretary Standards

2. *The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.*
4. *Most properties change over time; those changes that have acquired historic significance in their own right shall be retained and preserved.*
5. *Distinctive features, finishes and construction techniques or examples of craftsmanship that characterize a historic property shall be preserved.*
6. *Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture and other visual qualities and, where possible, materials. Replacement of missing features shall be substantiated by documentary, physical or pictorial evidence.*
9. *New additions, exterior alterations or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale and architectural features to protect the historic integrity of the property and its environment.*

The roof shape of the building, structure or object shall be visually compatible with the buildings to which it is visually related. It is important to identify, retain and preserve roofs and their functional and decorative features that are important in defining the overall historic character of the building. This includes the roof's shape as hipped, gambrel or mansard; decorative features such as cupolas, cresting and chimneys; and roofing materials such as slate, clay and tile.

Roofs are highly visible components of historic buildings in Gainesville's Historic Districts. They are an integral part of a building's overall design and often help define its architectural style. Examples include mansard and belvederes which are primary features of the Second Empire and the Airplane Bungalow styles, respectively. Materials such as clay tile and ornamental metals which cover roofs in Gainesville are also significant and should be preserved in the course of rehabilitating a building.

Roof forms comprise an important part of streetscapes in the historic district and create a unified rhythm with neighboring buildings. The most numerous residential roof types are gable, hip, or a combination. Other common examples are pyramidal, gambrel, and clipped

gable (jerkinhead). Flat roofs with parapets predominate in commercial buildings in the Pleasant Street District.

In planning roof repairs, it is important to identify significant features and materials and treat them with sensitivity under Standards 2 and 5. Under Standard 6, significant features and materials should be repaired rather than replaced. If replacement of a deteriorated feature is necessary, the new materials should closely match the original.

Roofs perform an essential function in keeping a building weathertight. As a result, they are particularly subject to change. In the local district the most common original roofing materials were embossed or crimped sheet metal and sawn wood shingles. Virtually all original wood shingle coverings have been removed and often replaced with ornamental sheet metal. Such historic changes to roofs have gained significance in their own right and should be respected under Standard 4.

Where existing roofing material is non-original and non-significant, there is greater flexibility. The existing roof may be retained, or replaced in a manner known to be accurate based on documentation or physical evidence, or treated in a contemporary style in compliance with Standards 6 and 9. In reviewing replacement of non-historic roof surfacing, it is important to keep in mind, Standard 9. Even if the existing surfacing is inappropriate, the replacement material must be compatible with the overall design of the building.

Recommended

1. Alterations to the configuration or shape of a historic roof should be confined to portions of the building not visible from the right-of-way.
2. Repointing of chimney mortar joints shall match the existing composition, joint size, and profile.
3. Retain and preserve the roof's shape, historic roofing materials and features.
4. Preserve the original roof form in the course of rehabilitation.
5. Provide adequate roof drainage and insure that the roofing material provides a weathertight covering for the structure.
6. Replace deteriorated roof surfacing with matching materials or new materials, such as composition shingles or tabbed asphalt shingles, in dark shades that match the original in composition, size, shape, color, and texture.
7. Retain or replace where necessary dormer windows, cupolas, cornices, brackets, chimneys, cresting, weather vanes, and other distinctive architectural or stylistic features that give a roof its essential character.
8. Design rooftop additions, when required for a new use that are set back from a wall plane and are as inconspicuous as possible when viewed from the street.

Not Recommended

1. Removal of existing chimneys is discouraged. Removal of historic or architectural roofing features should be avoided, if possible. If removal is unavoidable, replacement material should match the existing fabric in composition, design, color, texture and other visual qualities.
2. Mortar with high portland cement content shall not be used.
3. Masonry surfaces shall not be sand-blasted.
4. Avoid applying paint or other coatings to roofing materials which historically have not been painted.

Staff Approval Guidelines

Additions and alterations to the roof that meet all of the following conditions can be approved by staff:

Vents and pipes for water heaters, dryers, stoves, etc., are appropriate;

Skylights which are located on portions of the roof not visible from the right-of-way and have flat surfaces and do not destroy or damage historic roofing features, shapes or materials;

Solar collectors, antennae and satellite dishes which are placed on portions of the roof not visible from the right-of way and do not destroy or damage historic roofing features, shapes or materials;

Replacing non-historic roofing material with a material of similar composition and design provided that the entire structure will be covered;

Replacing historic roofing material with a material of similar composition and design provided that the entire structure will be covered;

Chimneys that are designed in a manner appropriate to the period of the house, placed on the side elevation, located on the exterior of the building and do not destroy or damage historic roofing features, shapes or materials; and

Alterations to non-historic portions of contributing buildings provided they are compatible in scale, design and materials but distinguishable from the historic portions.

Board Approval Guidelines

Rooftop additions are not discouraged if they do not destroy significant historic or architectural fabric and if their design is compatible in size, scale, color, materials and character of the property and the neighborhood.

Rooftop additions should be inconspicuous when viewed from the street and be clearly distinguished from what is historic.

Dormers should be added to portions of the building not visible from the right-of-way. When a dormer must be constructed, the new dormer should generally match the appearance of existing dormers or, if none are present, draw inspiration from the architectural details on the building such as roof pitch, molding or window style. Contemporary dormers would generally detract from the overall historic character of the building.

Roof decks and balconies should only be added to portions of the building not visible from the right-of-way and constructed in a subordinate manner to the historic building.

Roof decks and balconies should be composed of materials that are sympathetic with the historic building.

June 2, 2020

Roof windows and skylights should be placed on portions of the building not visible from the right-of-way. Flat skylights which project minimally from the roof, are the recommended treatment.

The design of roofing features, shapes or materials which seek to replicate or duplicate a missing historic feature must be documented through historical, physical or photographic sources.

OVERVIEW

The Historic Preservation Board (HPB) is an advisory board to the City of Gainesville's Commission composed of citizens who voluntarily, without compensation commit their time and expertise to the stewardship of historic resources in our community.

The HPB approval is a procedure which occurs for alterations, construction, restoration, or other significant changes to the appearance of a structure in Gainesville's Historic District which have an impact on the significant historical, architectural, or cultural materials of the structure and/or the district. The City's historic review guidelines are available online at www.cityofgainesville.org/planningdepartment and within the Land Development Code, Section 30.112.

After submission of an application, the Historic Preservation Planner prepares a written recommendation for the board meeting which addresses whether the proposed changes are compatible with the criteria of the SECRETARY OF INTERIOR'S STANDARDS FOR REHABILITATION and the City of Gainesville's HISTORIC PRESERVATION REHABILITATION AND DESIGN GUIDELINES. Once staff has prepared and completed the staff report, an Agenda of the proposed meeting and the staff report will be posted online approximately 5 to 7 days prior to the HPB meeting, and can be found at www.cityofgainesville.org/planningdepartment - Citizen Advisory Boards - Historic Preservation Board.

Public notice signage is required to be posted at the property by the applicant no later than 10 days prior to the scheduled Historic Preservation Board meeting. The authorized Public Notice Signage Affidavit must be submitted once the sign is posted.

The applicant and/or owner of the property should be present at the Historic Preservation Board meeting and be prepared to address inquiries from the board members and/or the general public. The HPB meeting is a quasi-judicial public hearing with procedural requirements. The review body may approve, approve with conditions, or deny projects. It is not necessary for owners to be present at the HPB meeting if your COA has been staff approved.

In addition to a Certificate of Appropriateness (COA), a building permit may be required for construction from the Building Department. This is a separate process with submittal requirements. Building permits will not be issued without proof of a COA and the Historic Preservation Planner signing the building permit. After the application approval, the COA is valid for one year.

Please post the CERTIFICATE OF APPROPRIATENESS at or near the front of the building.

CERTIFICATION

BY SIGNING BELOW, I CERTIFY THAT THE INFORMATION CONTAINED IN THIS APPLICATION IS TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE AT THE TIME OF THE APPLICATION. I ACKNOWLEDGE THAT I UNDERSTAND AND HAVE COMPLIED WITH ALL OF THE SUBMITTAL REQUIREMENTS AND PROCEDURES AND THAT THIS APPLICATION IS A COMPLETE SUBMITTAL. I FURTHER UNDERSTAND THAT AN INCOMPLETE APPLICATION SUBMITTAL MAY CAUSE MY APPLICATION TO BE DEFERRED TO THE NEXT POSED DEADLINE DATE.

1. I/We hereby attest to the fact that the above supplied parcel number(s) and legal description(s) is (are) the true and proper identification of the area of this petition.
2. I/We authorize staff from the Planning and Development Services Department to enter onto the property in question during regular city business hours in order to take photos which will be placed in the permanent file.
3. I/We understand that Certificates of Appropriateness are only valid for one year from issuance.
4. It is understood that the approval of this application by the Historic Preservation Board or staff in no way constitutes approval of a Building Permit for construction from the City of Gainesville's Building Department.
5. The COA review time period will not commence until your application is deemed complete by staff and may take up to 10 days to process.
6. Historic Preservation Board meetings are conducted in a quasi-judicial hearing and as such ex parte communications are prohibited (Communication about your project with a Historic Preservation Board member).

PROJECT DESCRIPTION

1. DESCRIBE THE EXISTING CONDITIONS AND MATERIALS Describe the existing structure(s) on the subject property in terms of the construction materials and site conditions as well as the surrounding context.

2-story, single-family house w/ shingle roof

2. DESCRIBE THE PROPOSED PROJECT AND MATERIALS Describe the proposed project in terms of size, affected architectural elements, materials, and relationship to the existing structure(s). Attach further description sheets, if needed.

Pont mounted PV (photovoltaic/solar) system.

47 x Axitec 320W panels and 47 x Enphase IQ7 microinverters

GEO-Fasten milcon flush mounts

DEMOLITIONS AND RELOCATIONS (If Applicable)

Especially important for demolitions, please identify any unique qualities of historic and/or architectural significance, the prevalence of these features within the region, county, or neighborhood, and feasibility of reproducing such a building, structure, or object. For demolitions, discuss measures taken to save the building/structure/object from collapse. Also, address whether it is capable of earning a reasonable economic return on its value. For relocations, address the context of the proposed future site and proposed measures to protect the physical integrity of the building.) Additional criteria for relocations and demolitions: Please describe the future planned use of the subject property once vacated and its effect on the historic context.

N/A

MODIFICATION OF EXISTING ZONING REQUIREMENTS (If Applicable)

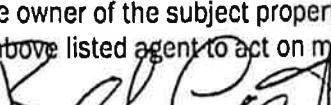

Any change shall be based on competent demonstration by the petitioner of Section 30-112(d)(4)b.

Please describe the zoning modification and attach completed, required forms.

No 87478

STATE OF

FLORIDA
PROFESSIONAL ENGINEER

NOTES:
 1. ALL ASPECTS OF THE ELECTRICAL WORK REQUIRED TO COMPLETE THE PROJECT REFERENCED IN THIS DOCUMENT
 SHALL COMPLY WITH THE MANUFACTURERS' RECOMMENDATIONS/SPECIFICATIONS AND ALL CODES, STATUTES AND
 STANDARDS ADOPTED BY THE STATE AND THE LOCAL AUTHORITY HAVING JURISDICTION.
 2. ALL COMPONENTS MUST BE GROUNDED PER NEC 800.4.
 3. ALL EQUIPMENT SHALL BE LISTED PER NEC 800.4(D).
 4. THE INFORMATION PROVIDED IN THESE DOCUMENTS IS NOT EXHAUSTIVE. IT REMAINS THE CONTRACTOR'S
 RESPONSIBILITY TO ACHIEVE THE PROPOSED INSTALLATION, IN FULL EXERCISE OF AND COMPATIBLE WITH THE
 ITEMS IDENTIFIED IN NOTE 1.

5. PER NEC 890.17 PROVIDE A WARNING SIGN AT ALL LOCATIONS WHERE TERMINALS OF THE DISCONNECTING
 MEANS BE TERMINATED IN THE OPEN POSITIONS. SIGN SHALL READ "WARNING-ELECTRIC SHOCK HAZARD - DO
 NOT TOUCH TERMINALS - TERMINALS ON BOTH LINE AND LOAD SIDES MAY BE ENERGIZED IN THE OPEN
 POSITION OR EQUIVALENT".
 6. PER NEC 800.10 PROVIDE A PERMANENT PLAQUE OR DIRECTORY SHOWING ALL ELECTRIC POWER SOURCES ON
 THE PREMISES AT SERVICE ENTRANCE.
 7. RECONNECTION METRIC SWELL COMPLY WITH NEC 705.12.
 8. PV METER MAY OR MAY NOT BE REQUIRED BY THE AHJ AND/OR UTILITY FOR INTERCONNECTION.
 9. CONDUCTOR SIZING OF THIS DESIGN IS BASED ON RACEWAYS LOCATED OUTSIDE ATTICS OR NOT EXPOSED
 TO DIRECT SUNLIGHT, WHERE TWO DIFFERENT AMPACITIES APPLY TO ADJACENT PORTIONS OF A CIRCUIT, THE
 HIGHER AMPACITY SHALL BE PERMITTED TO BE USED BEYOND THE POINT OF TRANSITION, A DISTANCE EQUAL TO
 3 IN. (100 mm) OR 10 PERCENT OF THE CIRCUIT LENGTH TAIRED AT THE HIGHER AMPACITY, WHICH EVER IS LESS.
 10. NEC 100.15 (B)(2)
 11. LINE TAPS TO BE MADE WITH LSCO KUP-L-TAP INSULATION PIERCING CONNECTOR.
 12. GFI BUILT IN TO ALL INVERTERS.

SPECIFICATIONS	
S-5	

Enphase IQ 7 and IQ 7+ Microinverters

AXITEC®
high quality german solar brand

AXIblackpremium HC 310 - 320 W

Electrical data (at standard conditions (STC) irradiance 1000 watt/m², spectrum AM 1.5 at a cell temperature of 25°C)

Type	Nominal output power	Efficiency	Open circuit voltage	Short circuit current	Nominal current
Pmp	310 Wp	18.6%	40.0 V	7.95 A	9.45 A
AC-310WPH205	315 Wp	18.5%	40.1 V	7.96 A	9.56 A
AC-320WPH1205	320 Wp	19.26%	40.2 V	10.11 A	9.64 A

Limit values

System voltage	(1000 VDC (UL 1600 VDC) or CLASS C (IEC 61700-2-20))
Module Endurance	1000 VDC (UL 1600 VDC) or CLASS C (IEC 61700-2-20)
Max. short-circuit current	1131 PPF
Reverse current load IR	20.0 A
Permissible operating temperature	-40°C to 65°C / -40°F to 155°F

(No internal switches, diodes, fuses, etc. may be applied to the module)

Protection Class IP67
43.3 inch / 109.5 cm
Plug module IP67, MC4

Weight:
1.76 kg / 3.86 lb

Power connection:

Input:
43.3 inch / 109.5 cm
Wind speed: 1 m/s, Temperature: 20°C

Output:
AC-310WPH205
AC-320WPH1205

Dimensions:
49.73 mm (1.95 in) x 207.5 mm (8.13 in) x 35 mm (1.38 in)

Environmental conditions:
Temperature: 0°C to 40°C
Humidity: 0% to 95% RH
Altitude: 0 to 2000 m
Wind speed: 0 to 12 m/s
Temperature: -40°C to 65°C
Humidity: 0% to 95% RH
Altitude: 0 to 2000 m
UV radiation: 0 to 1000 W/m²

Temperature coefficients:

Voltage loss:
0.04%/
Current loss:
-0.39%/
Output Power:
-0.39%/
Luminosimetric curve:
Current vs. Power

Re: Brandon Peterson PV System Installation

Case #: xxx

214 NW 5th Ave.

Gainesville, FL 32601

The purpose of this letter is to clarify that the Brandon Peterson PV Panel Array installation is necessary for PV Production and was selected based on the property's location, orientation and sun light capture analysis.

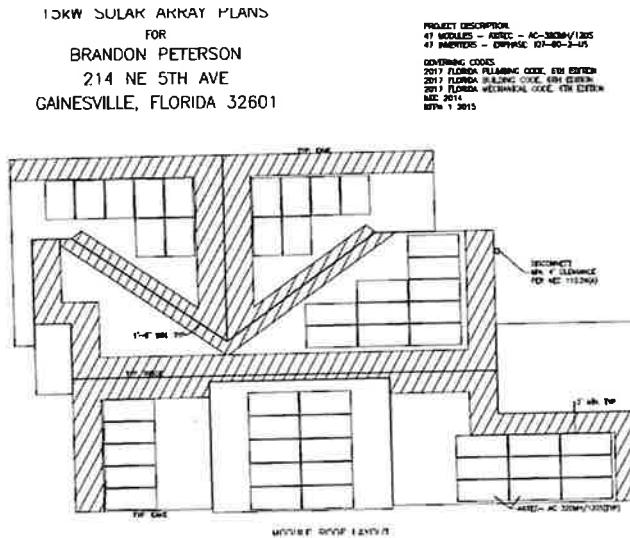

Please refer to Picture #1 below where you can see that the current location of the PV modules follows the roofline sections that can capture the sun light necessary to carry the calculated electrical load.

Picture #1.

Picture #2 below has the current PV array installation.

Picture #2.

Moving the PV panels to any other location would negatively affect the production of the PV system and defeats the purpose of helping carry the electrical load using renewable energy instead of the traditional electrical utility.

Best Regards,

Pedro E. Cruz, PE
